

SwissIX: short update

SwiNOG #18

April 2, 2008

Fredy Künzler

President of the SwissIX Association

kuenzler@init7.net

SwissIX is still growing

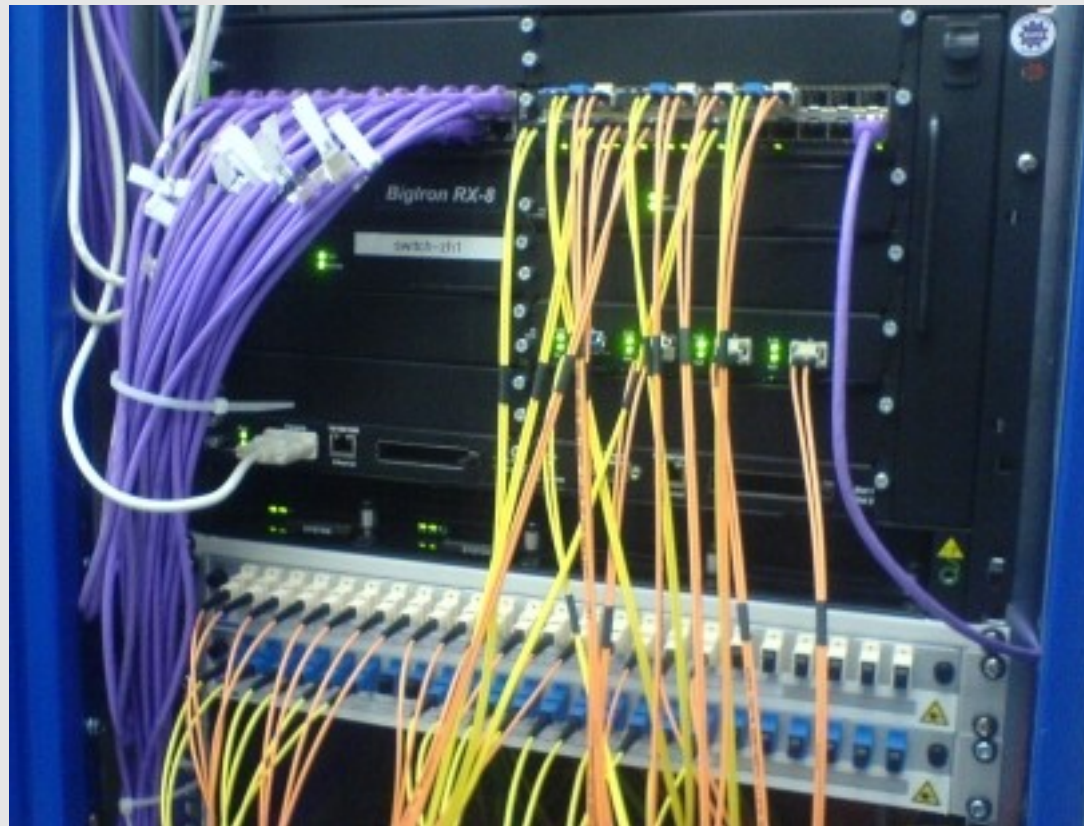

(April 2, 2009)

**98 active participants (ASN), 109 ports
(+15 since May 2008)**

(April 20, 2005)

37 active participants

2nd 10Gig site (InterXion) soon active: another Foundry / Brocade RX-8 is in the lab and should be operational anytime soon ...

Route server: up and running (Google peers only via routeserver) – please ping noc at swissix if you want to peer with the route server.

New international participants:

- Microsoft (AS8068) – 10Gig
yes, nice, but the required legal and administrative work was way more than just informal ...**

Future developments:

- renumbering – current /24 network is too small in the future– better renumber soon (/23 already assigned)
- another location (Colobâle)
- Le Romandie: sorry, no connectivity sponsor ... however Init7 will offer soon reasonable priced MPLS VLL (FastE / GigE) for remote peers in Geneva (Equinix, Rue de la Confederation and maybe CERN) with cabling to the SwissIX switch in Zurich

Issues:

SwissIX starts to face the problems of purely volunteer driven exchange.

- Response time to requests are sometimes way too long ...
- monitoring / maintenance issues (DDOS against the peering /24 attack)
- do we need a professional NOC? Outsourcing some task and pay for it?
- introducing port fees at Equinix Zurich? (Equinix never supported SwissIX, while all other colocation did in many ways)

**Questions?
Happy Peering!**
