

# Network Telemetry and Big Data

From Flow Aggregation over Streaming Telemetry to  
Anomaly Detection

swisscom

# Towards Intelligent Monitoring

Devices do not know the network. Big Data & Analytics does

Bringing visibility and structure into what appears to be chaos to humans, but makes sense so machines and networks

is **3.83x** lower than usual (diff: -74%)  
Severity: Major

**Swisscom Schweiz DCI**  
**Logical Cconnection 605 - 64497:6**

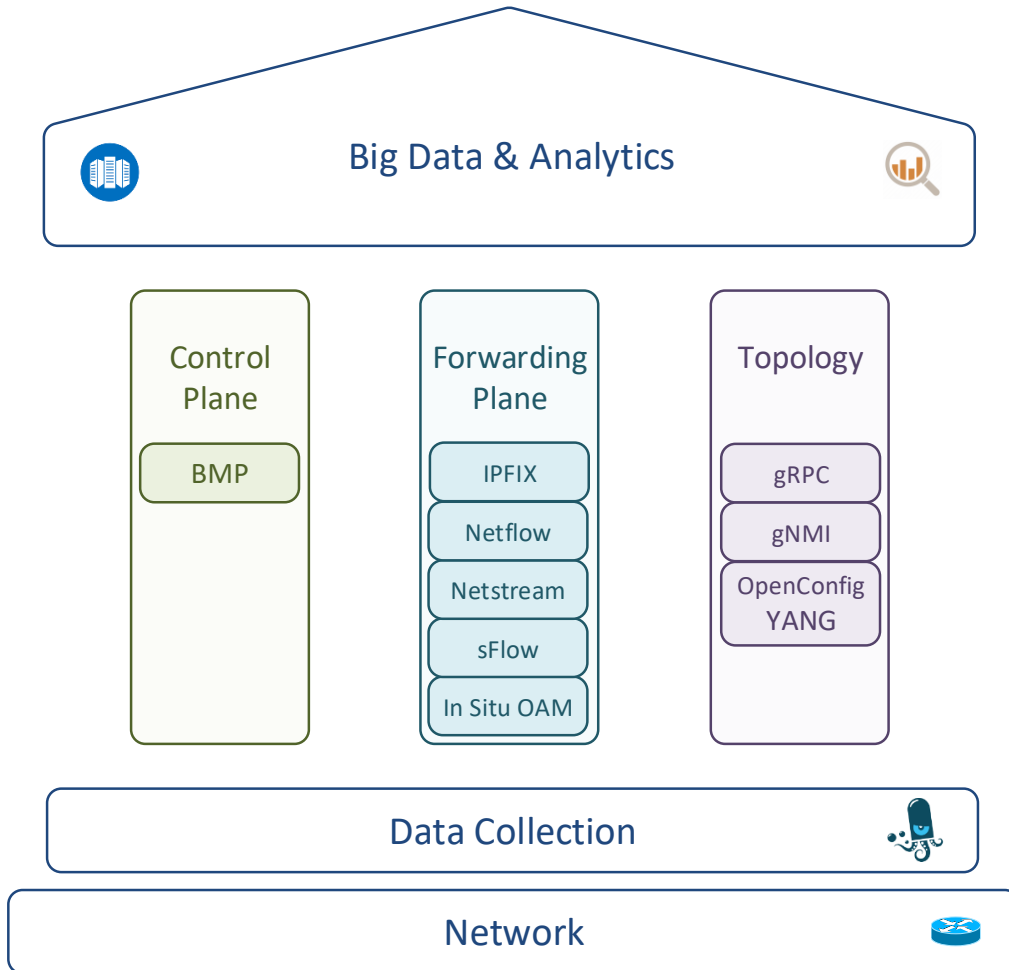

Metabase

Auto Insight

# Data collection with Network Telemetry

Without order and structure, Big Data & Analytics gets lost

## Network Telemetry

- > A data collection framework where the network device pushes its metrics to Big Data.

## Topology metrics

- > How logical and physical network devices are connected with each other.

## Control-plane metrics

- > How the network is provisioned and redundancy works.

## Forwarding-plane metrics

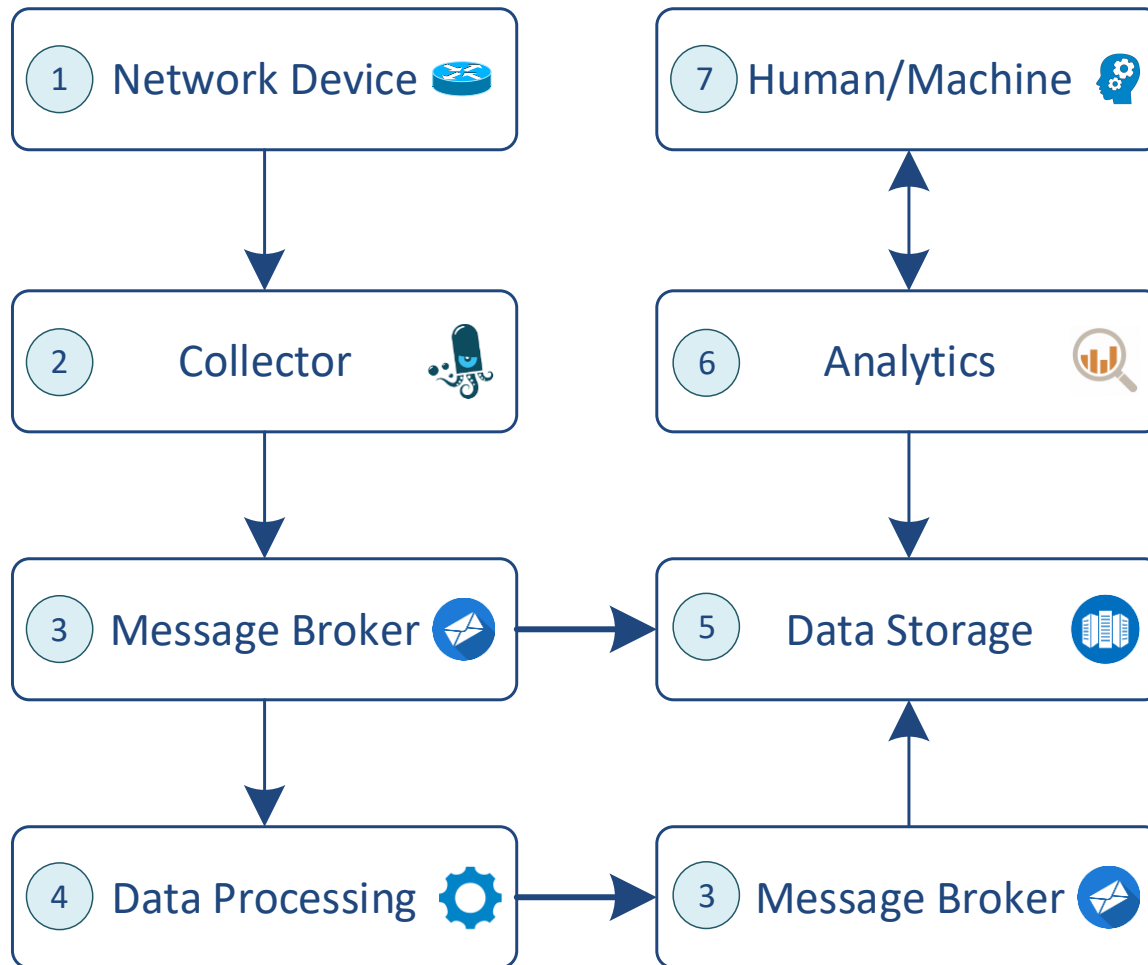

- > How traffic flows through the network.

# Data pipeline with Big Data

How do you eat an elephant? Piece by piece

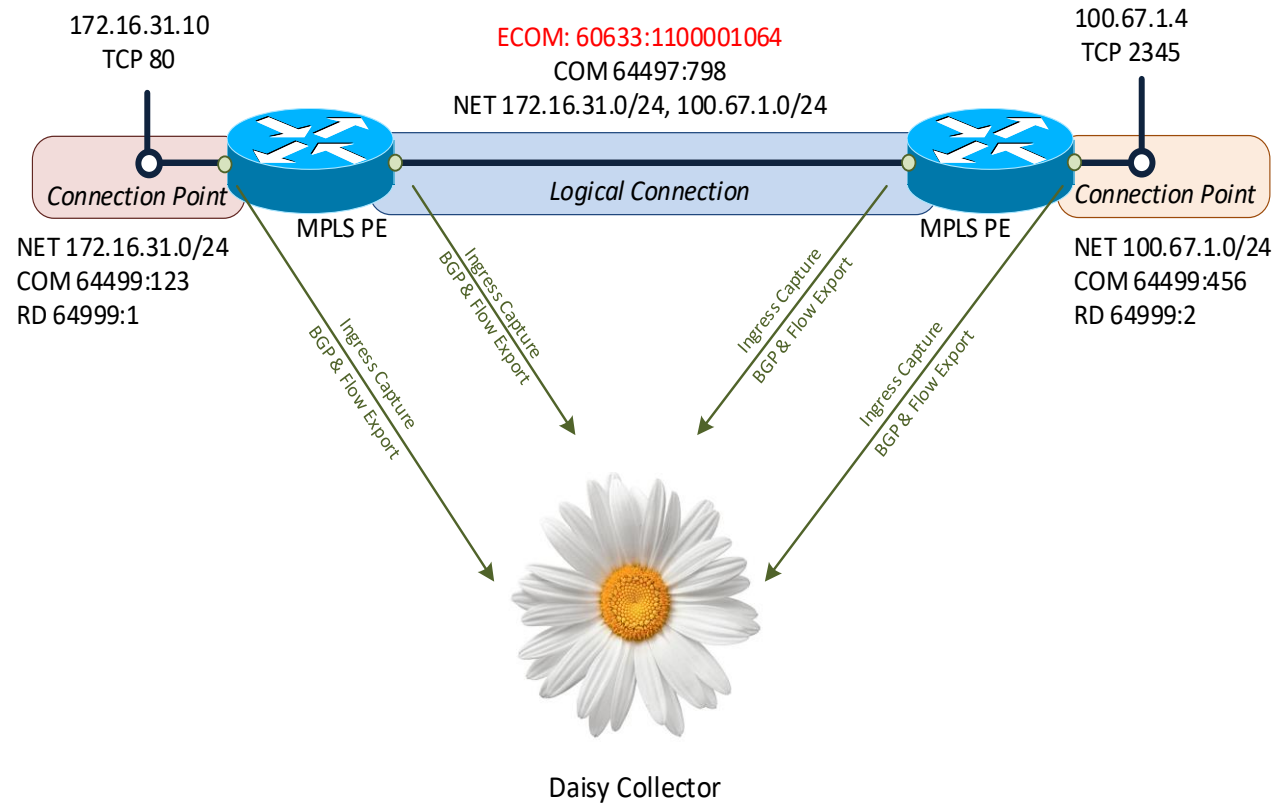

1. **Pushing** metrics to collectors.
2. **Aggregate** or directly **ingest** into topics.
3. **Buffers, consolidate and forward.**
4. **Process** and re-ingest.
5. **Import** for midterm storage.
6. Access metrics and **perform baseline measurements.**
7. **Are informed** about events and possible service impact.

# Intent Based Network - Insights into metric modelling

Without a BGP route-distinguisher, 192.168.1.1 isn't unique

**Service Inventory** consists of various logical elements which **influences predefined forwarding behavior within network**.

Service Inventory is **pushed with BGP** service and topology relevant **standard communities into BGP network**.

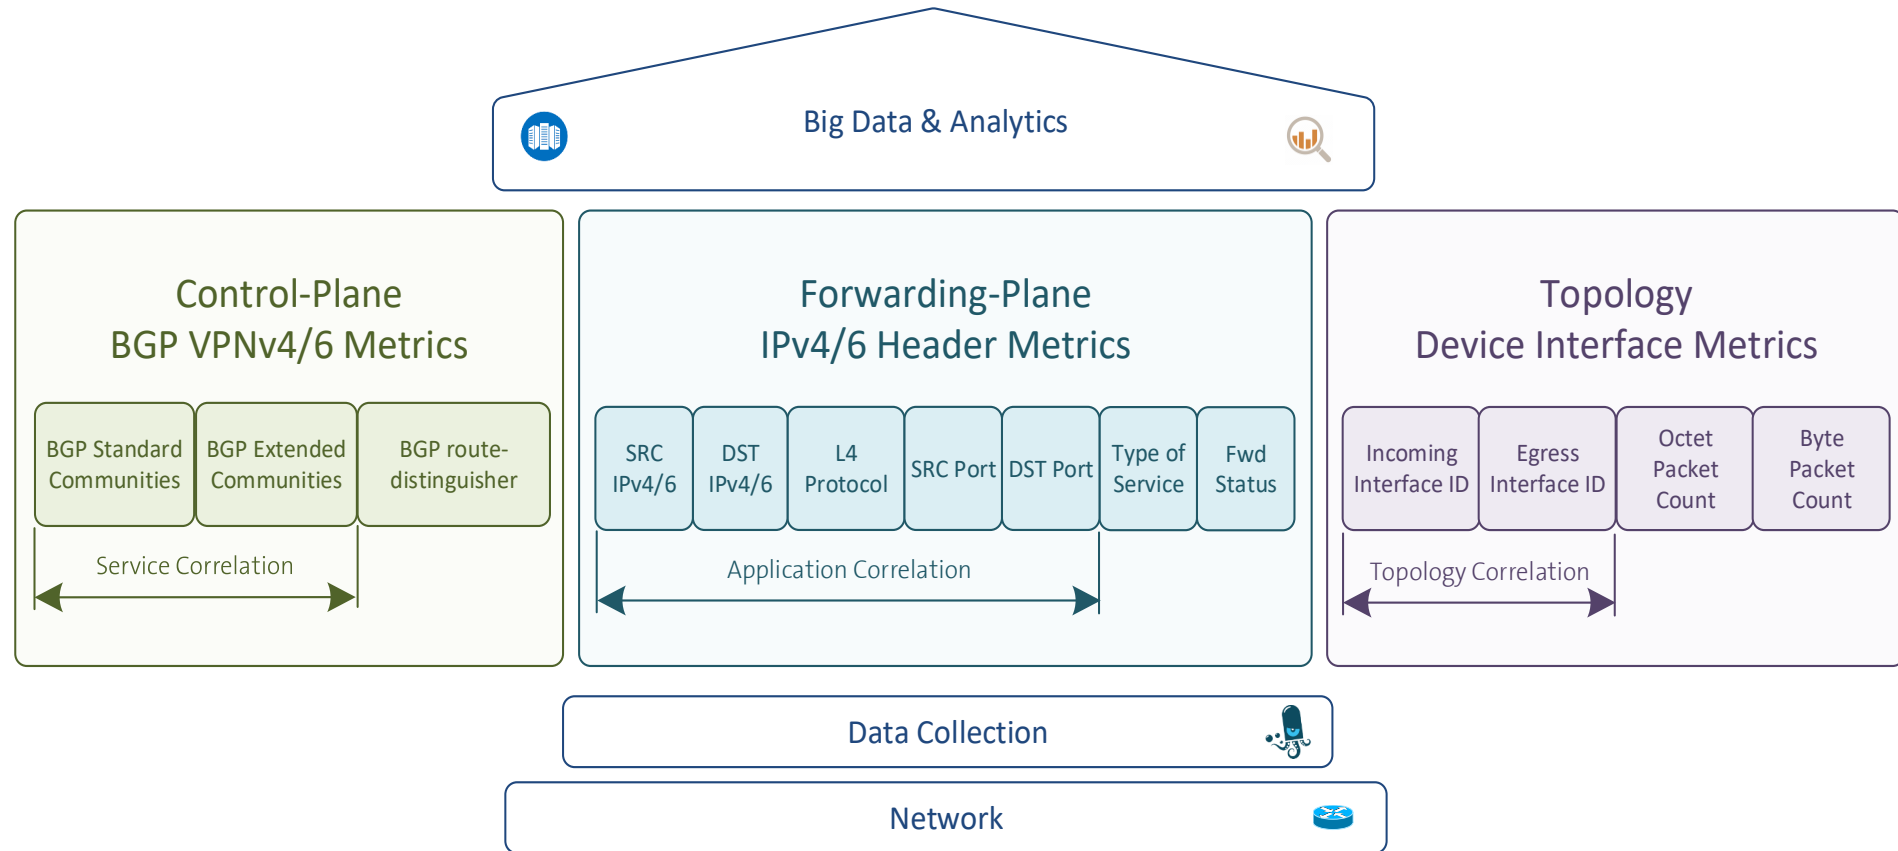

MPLS PE **exposing flow (forwarding-plane) and BGP (routing control-plane) to collector**.

Collector **collect, correlate, aggregate and ingest into message broker**.

# VPN Service view with BGP VPNv4/6 Flow Aggregation

Depending our needs, we can look at data from different angles

BGP communities are used to **correlate to service inventory**

IPv4/6 address, Layer 4 port and protocol are used to **correlate to applications**

Interface ID will be used to **correlate to physical topology** collected through streaming telemetry

# Kafka Message ingestion - BGP VPNv4/6 Flow Aggregation

BGP and flow metrics come together into one message

}
```

- > Example Kafka message containing correlated **VXLAN**, **IPFIX Flow** and **collector** enriched metrics
- > Metric correlation is performed on routers.

# Huawei and Swisscom Collaboration within Nectcity

Alone we can do so little; together we can do so much

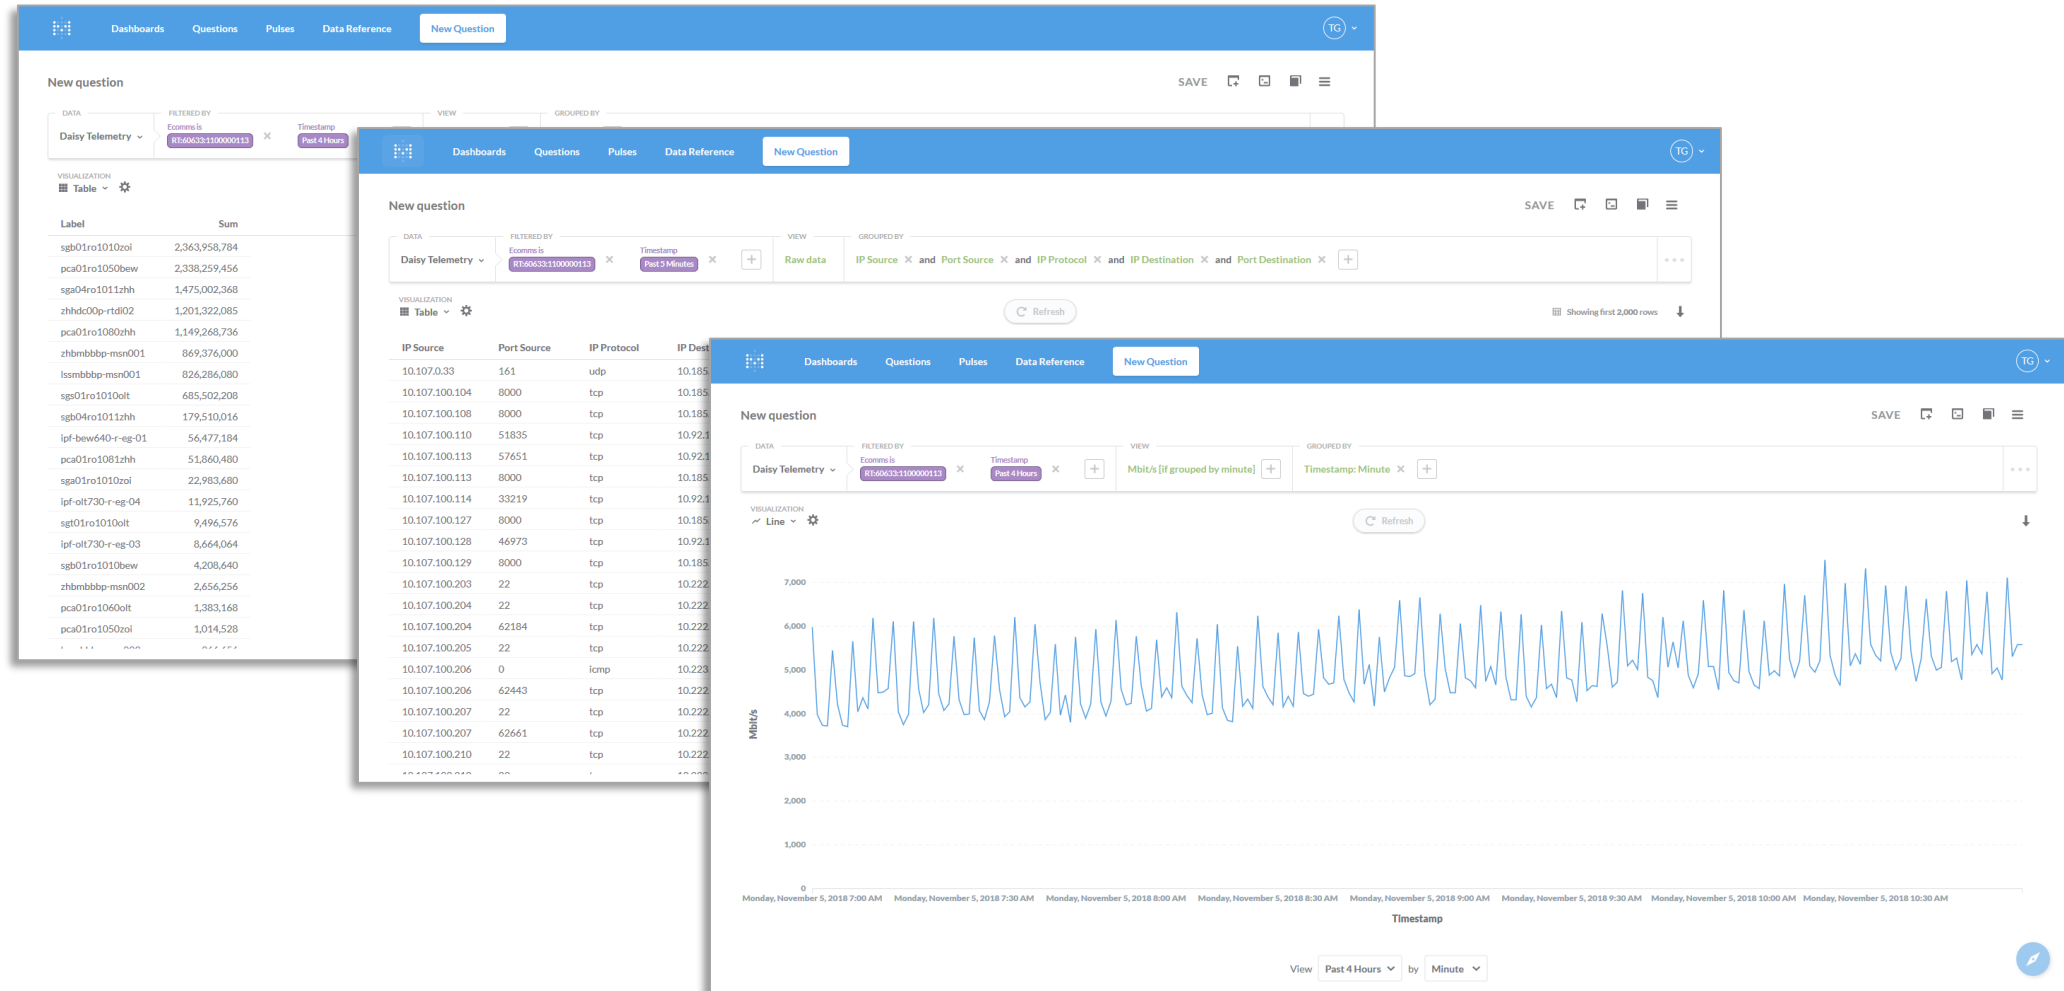

- Since March 2018, Huawei and Swisscom collaborate under Nectcity to coordinate cutting edge technology developments.
- Within this scope, **Netstream VXLAN inner-IP feature was extended** to support the next generation Swisscom Broadband IPv6 underlay network and expose VXLAN header metrics on highly scalable Cloud Engine Platform in **latest VRP V200R005 release**.

# Its Demo Time !

## Network Telemetry at Swisscom

***"Wait a minute, Doc. Are you telling  
me that you built a time machine...  
out of a DeLorean?!"***

Marty McFly... 1985 - Back to the Future

## Meerkat

Anomaly Detection Engine @  
Timeseries Analytics Platform

Zongren Liu  
Senior Data Scientist

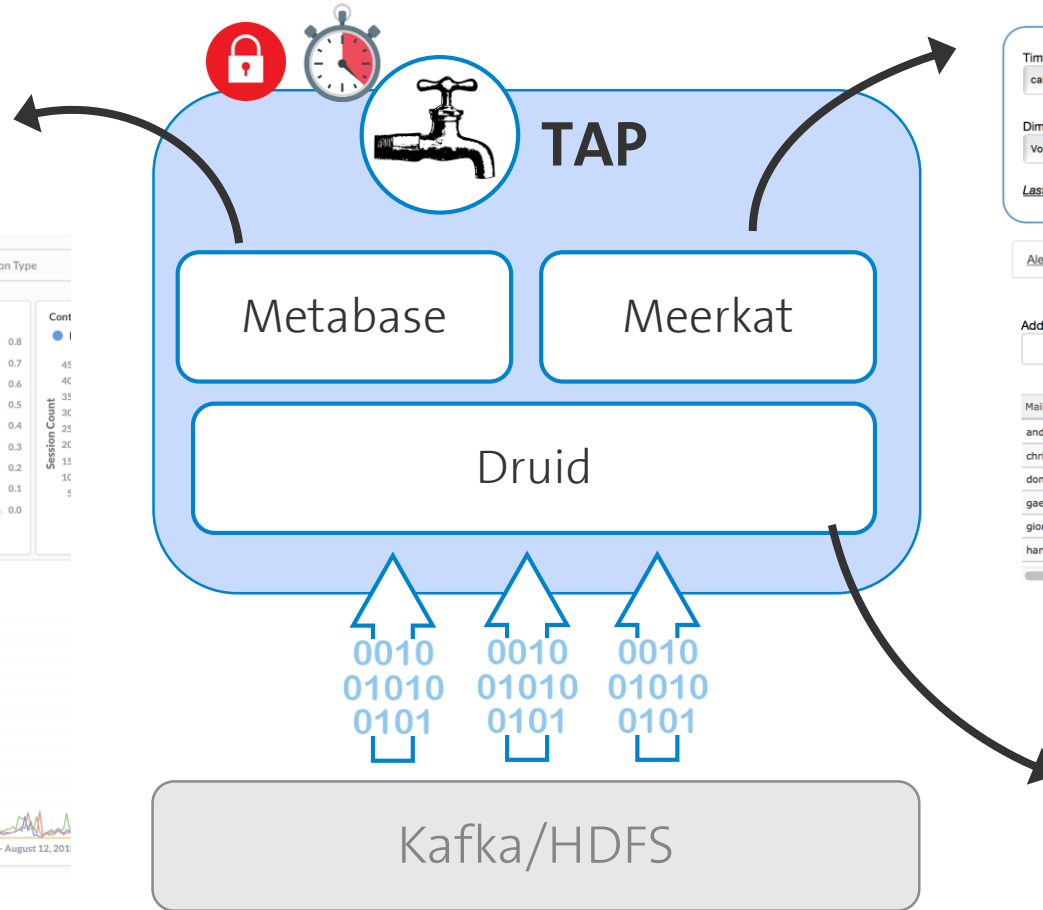

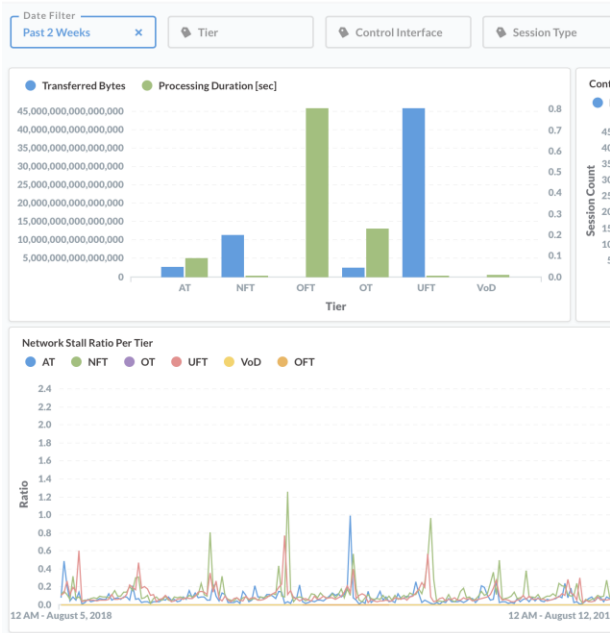

# Timeseries Analytics Platform (TAP)

## From Analytics to Root Cause Analysis

### Self-service Analytics

### Anomaly Detection with Root Cause Analysis

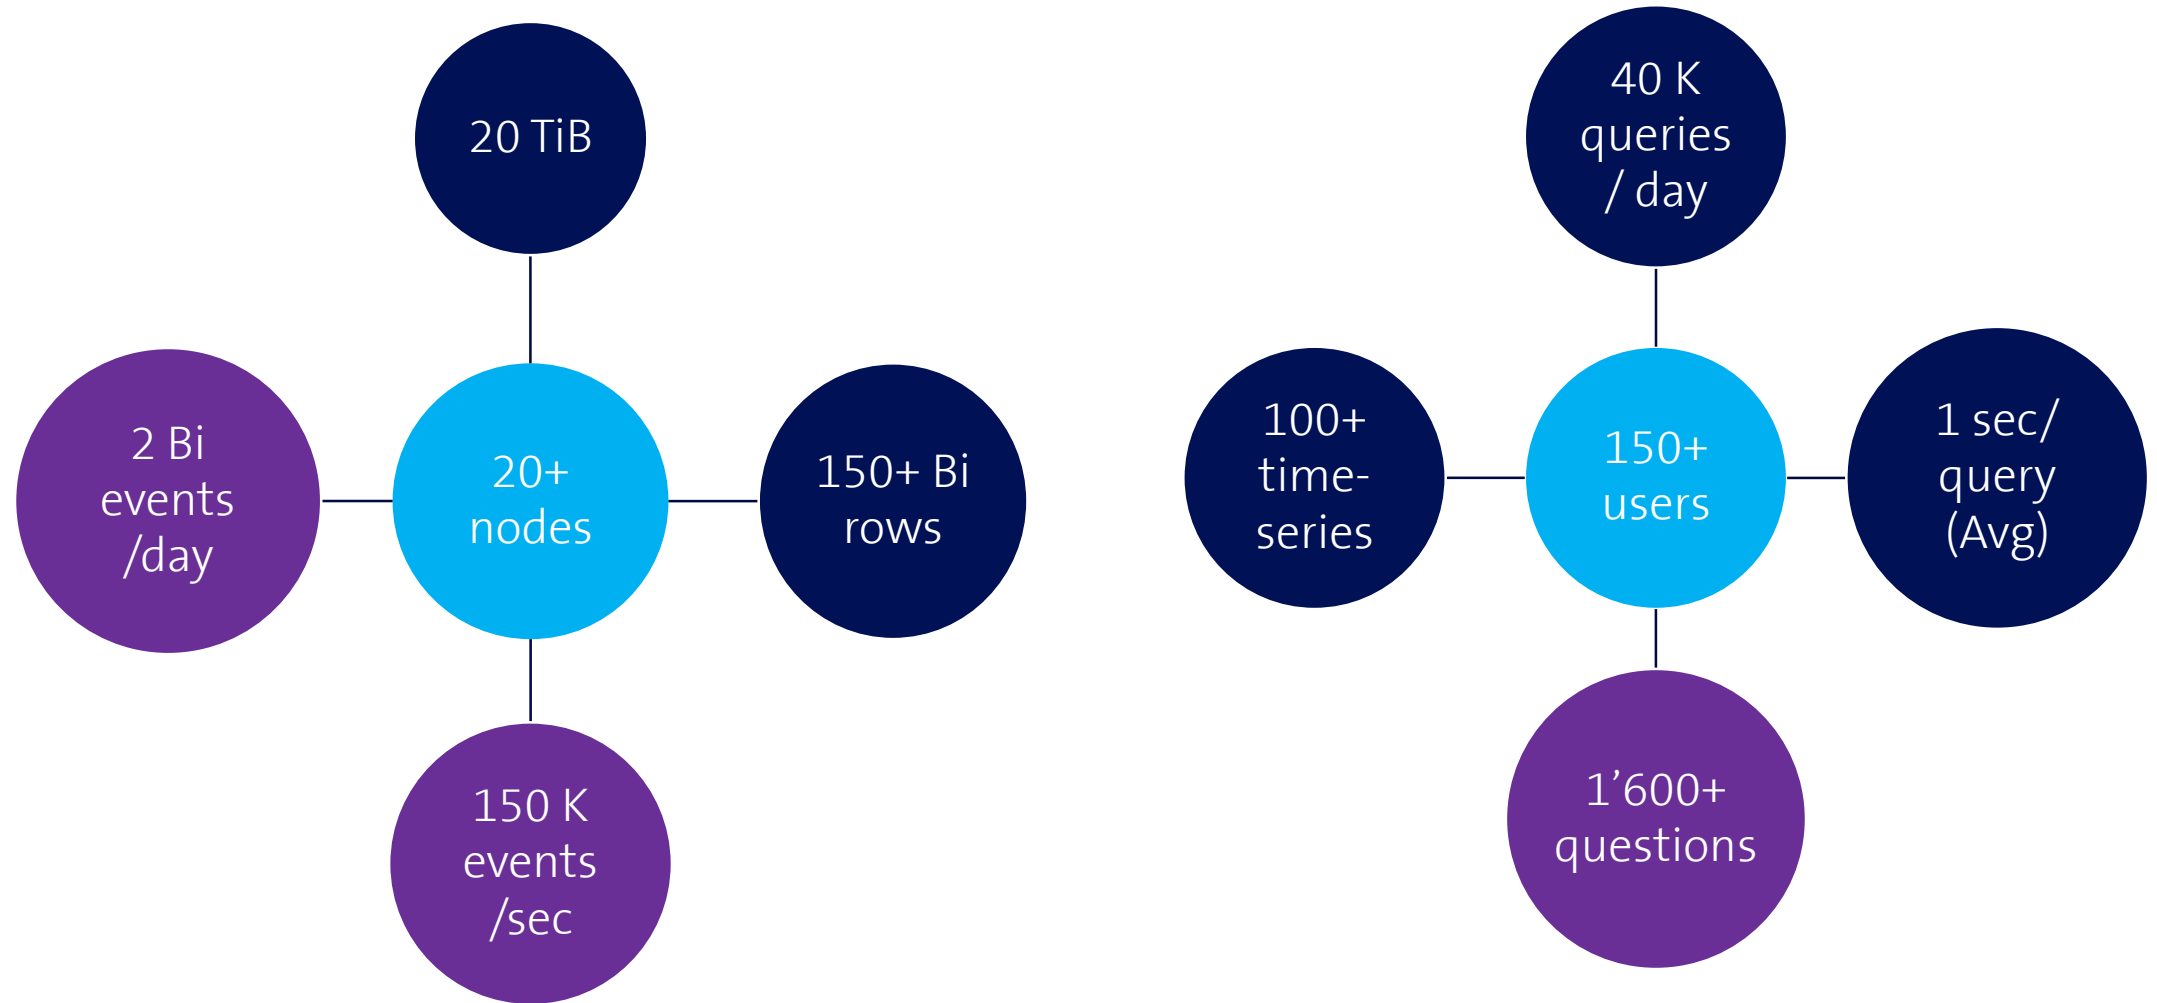

### Realtime OLAP Storage & Query Engine

# TAP in Numbers

In seconds to billions

# Towards Intelligent Monitoring

Threshold based approach is not enough

**Need to build a statistical model that will**

- > Learn the time series pattern from historical data (and labels)
- > Predict future values and compare with real measurements

- Outlier if :  $|prediction - observation| > threshold$

# Challenges

Need to be quick and accurate

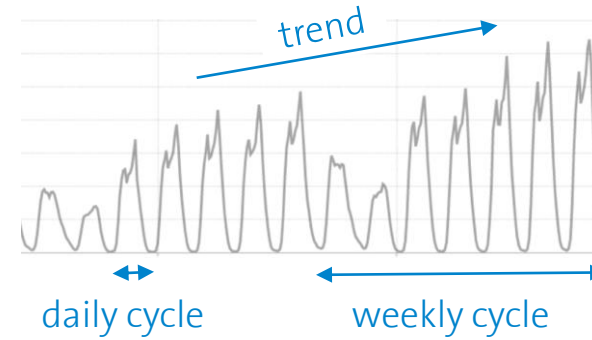

## Realtime detection

- > Online and fast algorithm
- > Delay & data quality handling

No/few labels => **Unsupervised (semi)** learning

- > Models auto selection/tuning

# Root Cause Analysis

Understand the *cause/impact* of an alerted anomaly

Based on *contextual data* stored in Druid

Timestamp	Failed Calls	Cell Tower	Brand		Firmware	KPI 2
12:00	10	a1	b1	...	z1	70
12:00	300	a2	b1	...	z2	400
12:00	20	a2	b1	...	z3	8
12:00	70	a3	b2	...	z65535	23

An engineering team may look at

- > 6 different categories
- > Having from 2 to 25'000 different values

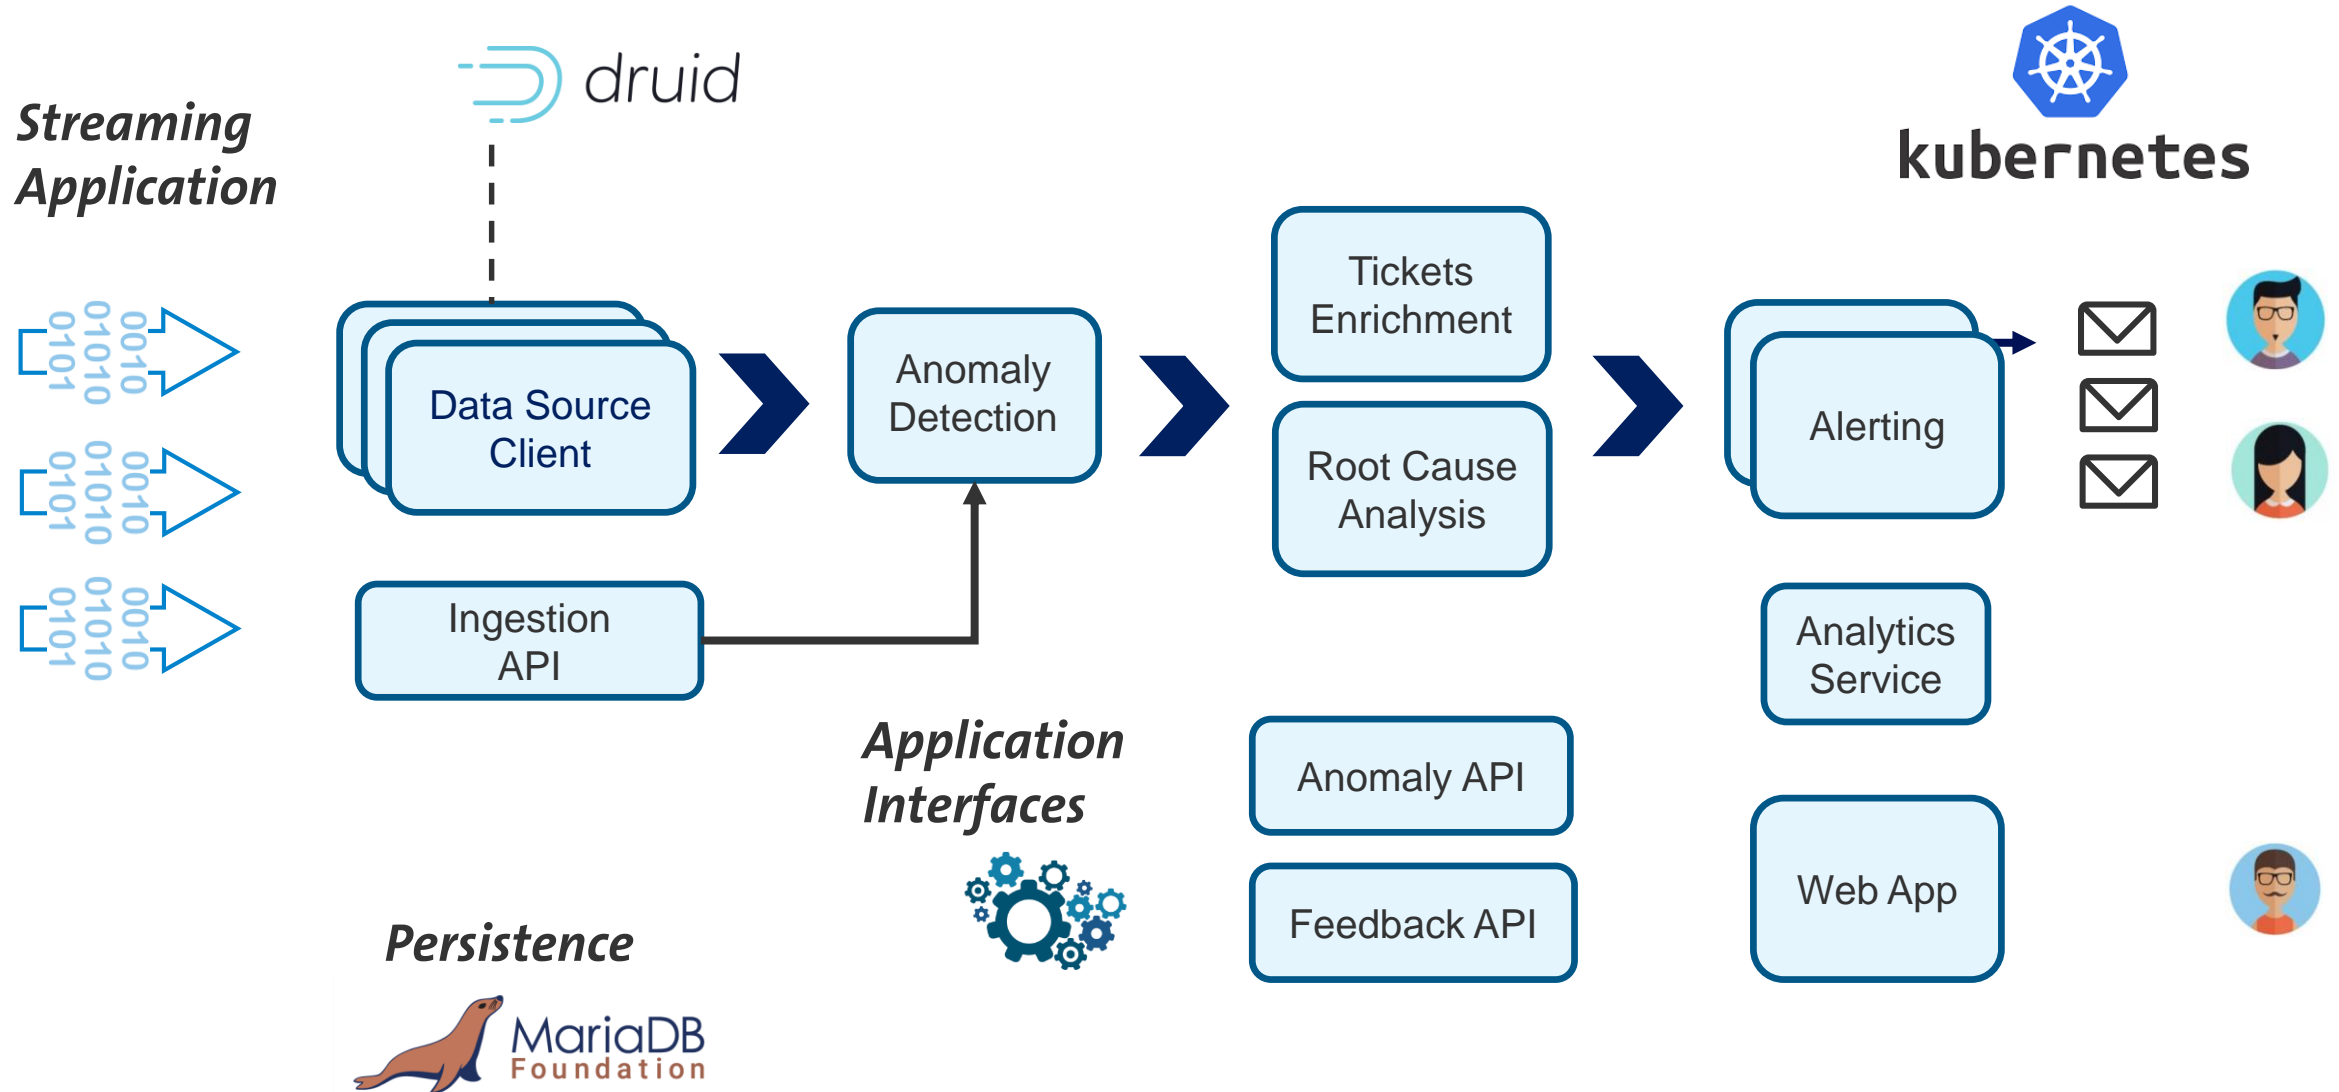

***Meerkat can do this a few seconds !***

# Meerkat – Building Blocks

How do you eat an elephant? Piece by piece

***"Jesus Christ, Doc, you  
disintegrated Einstein!"***

Marty McFly... 1985 - Back to the Future

whoami

Digging data out of networks worldwide for fun and profit for more than 10 years

# pmacct is open-source, free, GPL'ed software

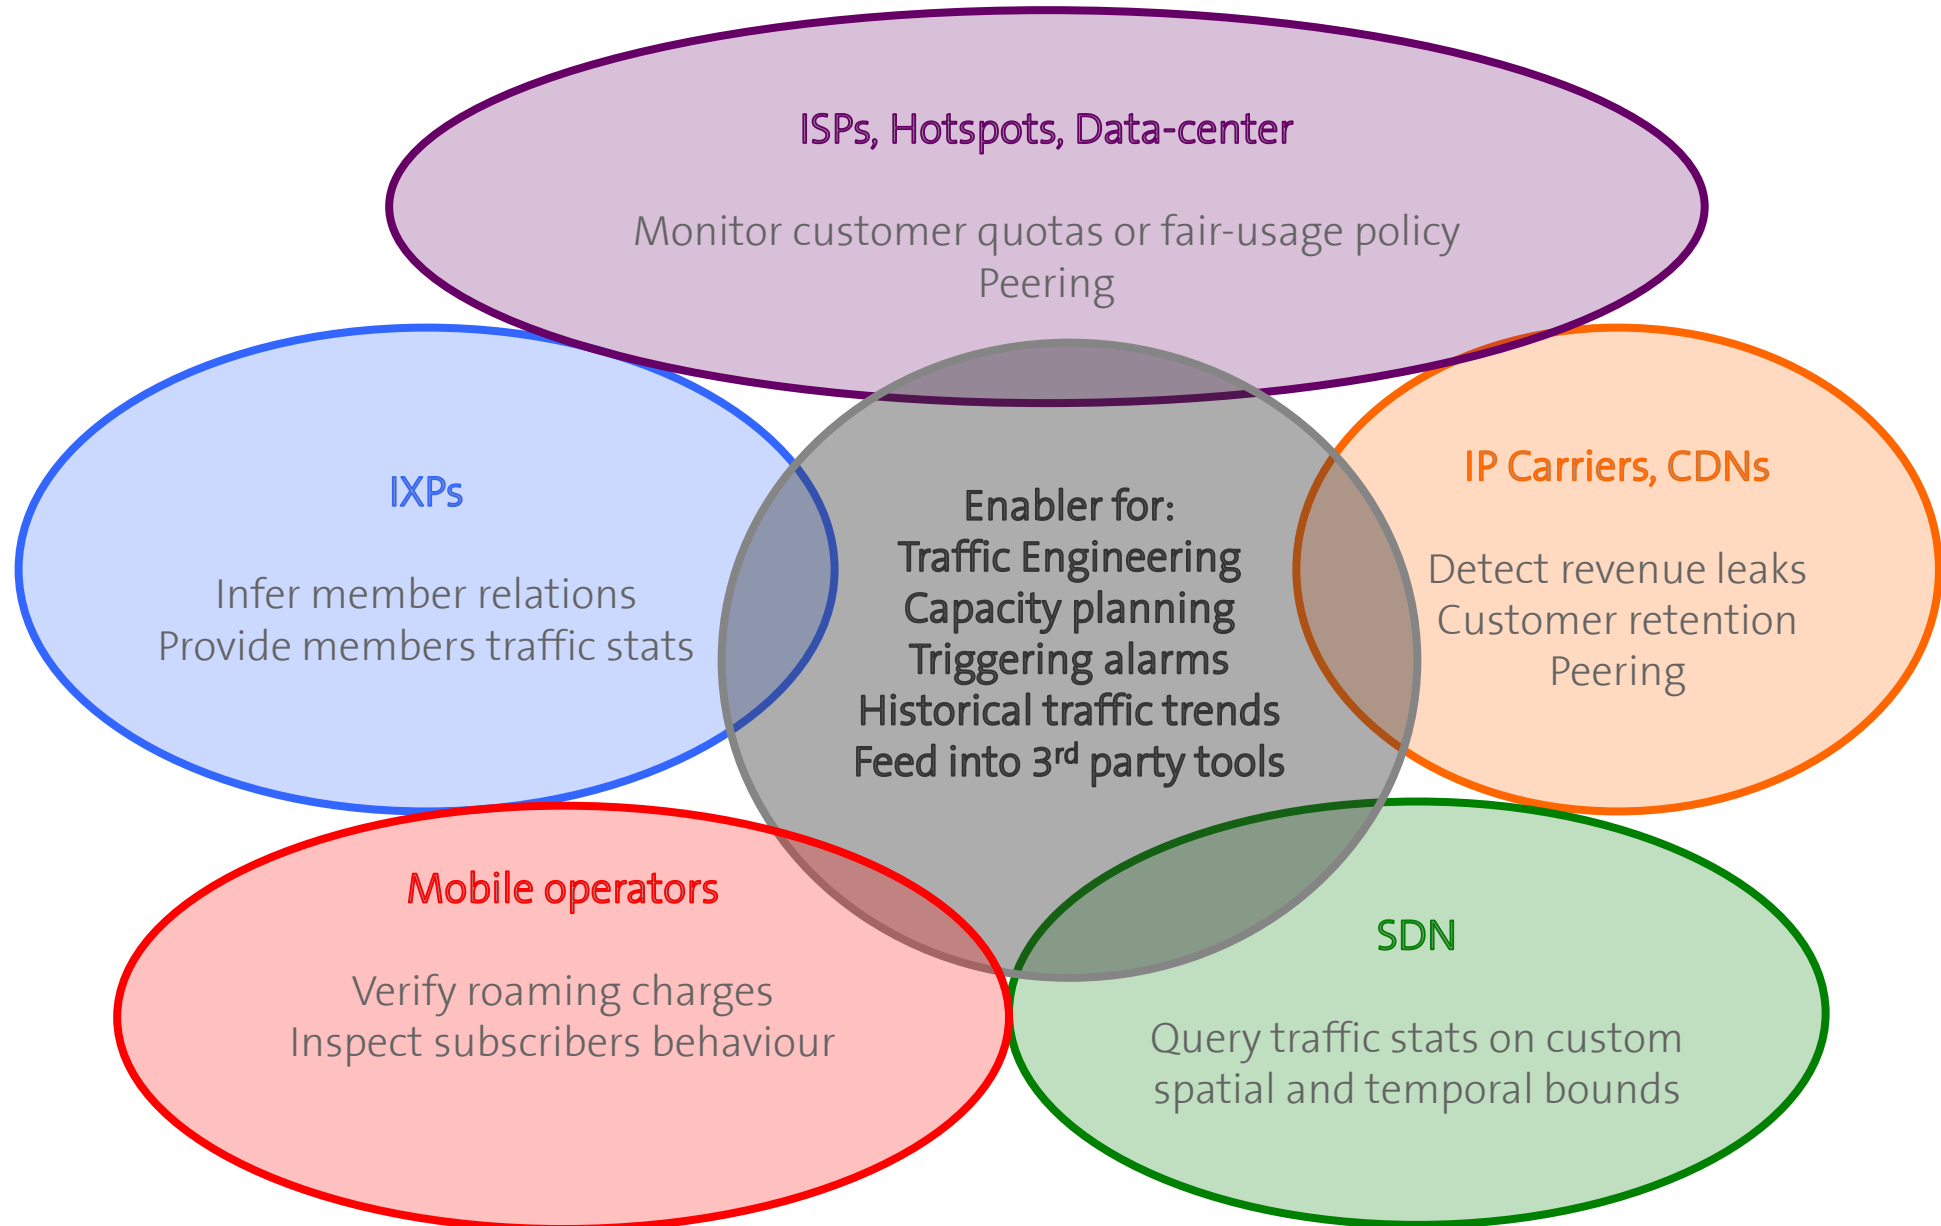

## The use-case for message brokers

# Use cases by industry

## Some technical facts (1/2)

### **Pluggable architecture:**

- › Can easily add support for new data sources and backends

### **Correlation of data sources:**

- › Natively supported data sources (ie. BGP, BMP, IGP, Streaming Telemetry)
- › External data sources via tags and labels

### **Pervasive data-reduction techniques, ie.:**

- › Data aggregation
- › Filtering
- › Sampling

## Some technical facts (1/2)

### **Build multiple views out of the very same collected network traffic dataset, ie.:**

- > Unaggregated to flat-files for security and forensics; or to message brokers (RabbitMQ, Kafka) for Big Data
- > Aggregated as [ <ingress router>, <ingress interface>, <BGP next-hop>, <peer destination ASN> ] and sent to a SQL DB to build an internal traffic matrix for capacity planning purposes

### **Enable analytics against the collected data sources (ie. BGP, BMP, Streaming Telemetry):**

- > Stream real-time
- > Dump at regular time intervals (possible state compression)

# Streaming Telemetry

## **A scalable replacement for SNMP:**

- > Push technology
- > Subscribing to data of interest

## **A long journey to standardization ahead:**

- > Models: Openconfig and vendor-specific
- > Transport: traditional, Netconf and gNMI
- > RPC: Netconf (YANG Push) and gNMI
- > Encoding: JSON and GPB

# pmacct & Streaming Telemetry (1/3)

## **Mission statement:**

- > Integrate Streaming Telemetry data with other relevant technologies (ie. IPFIX, BMP, etc.)
- > Especially in the current pre-standardization stage, offer an efficient multi-vendor collection layer for Streaming Telemetry

## pmacct & Streaming Telemetry (2/3)

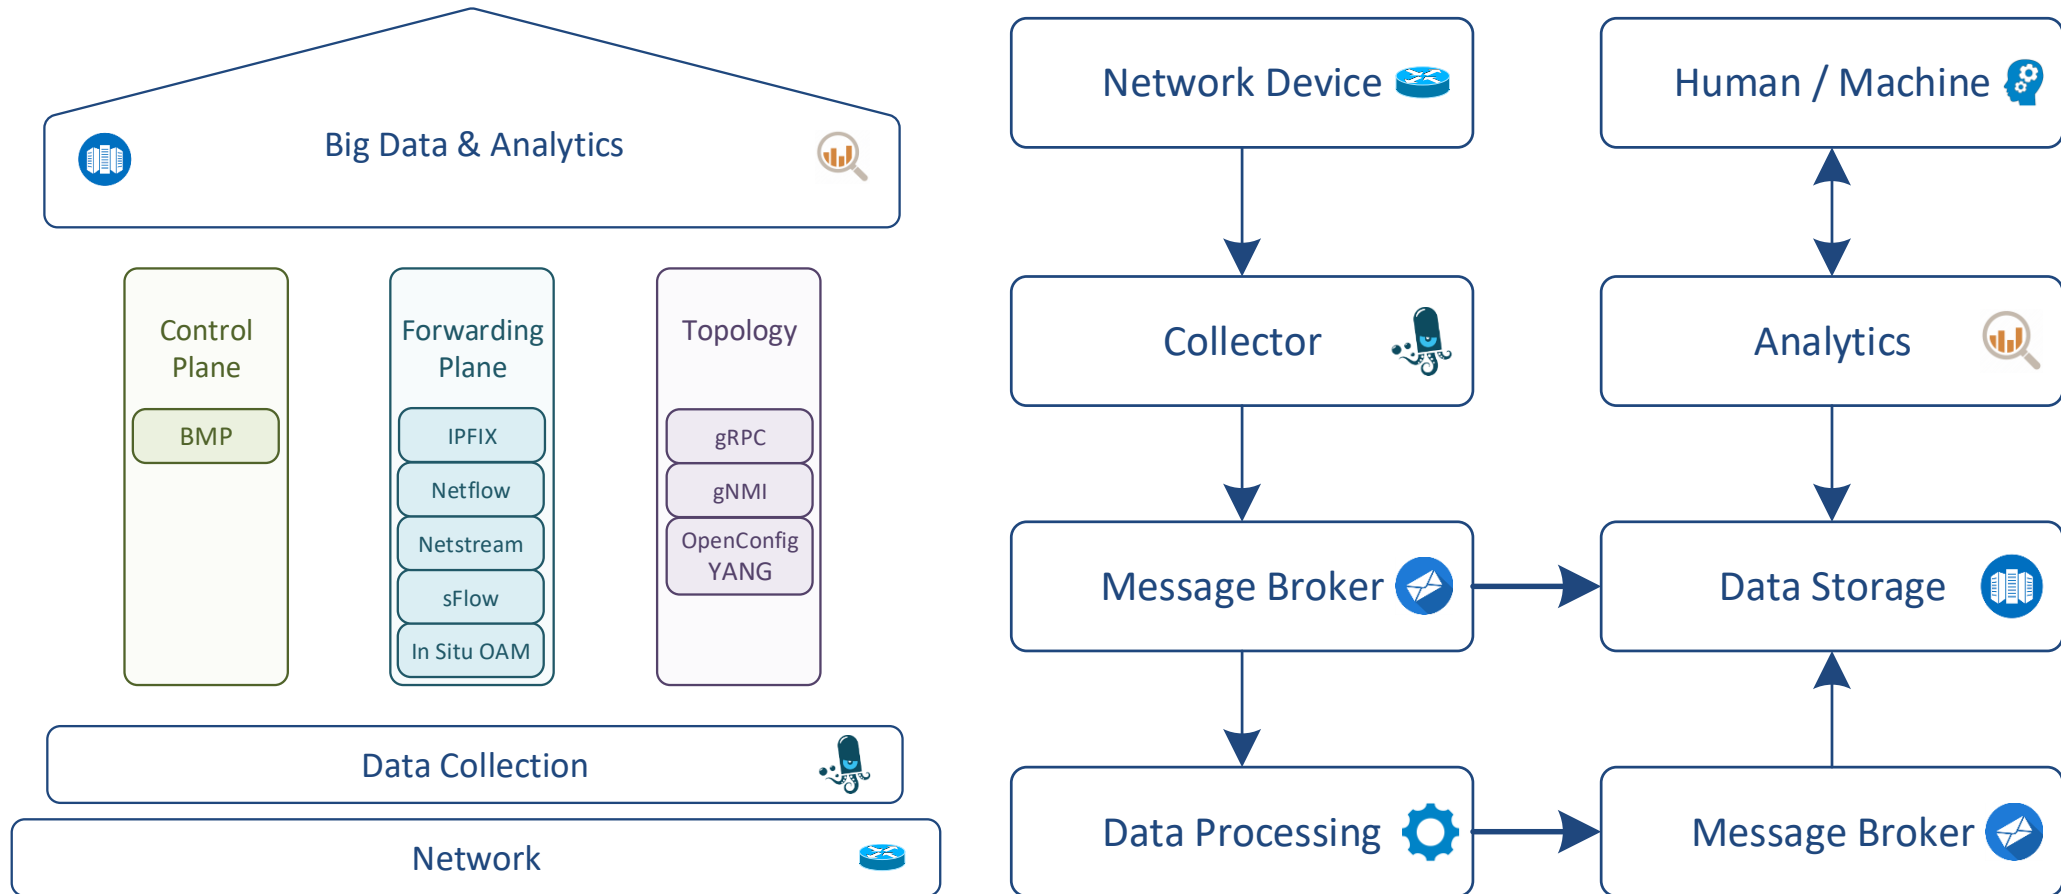

## pmacct & Streaming Telemetry (3/3)

# Glossary

What?

<b>pmacct</b>	pmacct is a small set of multi-purpose passive network monitoring tools by Paolo Lucente
<b>Daisy</b>	Is the Network Telemetry platform name at Swisscom
<b>Meerkat</b>	Is the Anomaly Detection platform name at Swisscom
<b>Netcity</b>	Memorandum between Swisscom and Huawei to improve collaboration
<b>Big Data</b>	Is set of applications and databases to manage a very large amount of metrics
<b>Anomaly Detection</b>	Compares real time metrics to history by using artificial intelligence
<b>Control Plane</b>	Steers the network. Example: BGP, Border Gateway Protocol
<b>Forwarding Plane</b>	Forwards traffic through the network. Example: FIB, Forwarding Information Base
<b>Topology</b>	Physical connections between a group of network devices
<b>Flow Aggregation</b>	With topology or control-plane correlated Layer2-4 IP flow metrics
<b>Streaming Telemetry</b>	A SNMP replacement where topology metrics are streamed to a collector
<b>OpenConfig</b>	A consistent set of vendor-neutral data models written in YANG
<b>Netconf</b>	Network management protocol for device configuration
<b>RabbitMQ, Kafka</b>	RabbitMQ and Apache Kafka are the two most popular message brokers
<b>Druid</b>	Apache Druid is a high performance analytics data store for time series metrics

# Glossary

## What?

### **VXLAN**

Virtual Extensible Local Area Network. An IP overlay encapsulation

### **VNI**

Virtual Extensible LAN Network Identifier. A unique VPN tunnel identifier

### **IPFIX**

IP Flow Information Export. A protocol to collect IP flow metrics

### **BMP**

BGP Monitoring Protocol. A protocol to collect BGP control-plane metrics

### **BGP**

Border Gateway Protocol. The routing protocol used in the Internet and at large networks

### **ASN**

Autonomous System Number. A network domain used in the routing protocol BGP

### **IGP**

Internal Gateway Protocol. Providing the next-hop attribute for BGP.

### **gRPC**

Google Remote Procedure Call, transport Protocol for Streaming Telemetry

### **gNMI**

Google Network Management Interface, IETF Draft for Streaming Telemetry

### **YANG**

Yet Another Next Generation. A data modelling language for topology metrics

### **JSON**

JavaScript Object Notation. A lightweight data-interchange format

### **GPB**

Google's language/platform-neutral, extensible mechanism for serializing structured data
