

The Future of Passive Multiplexing & Multiplexing Beyond 10G

From 1G to 10G was easy But beyond 10G?

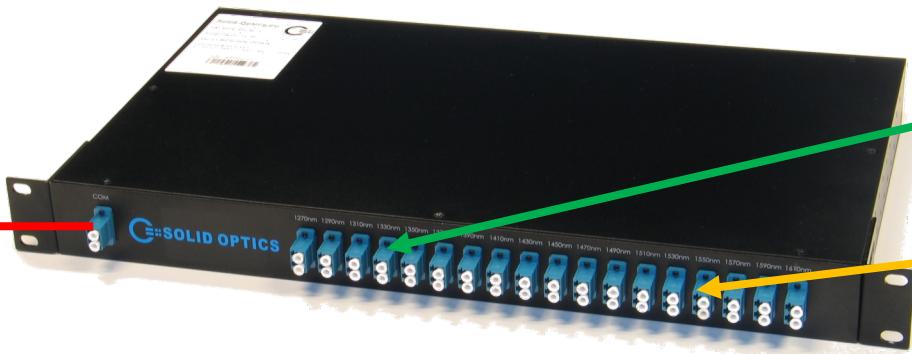

Ingredients for Multiplexing

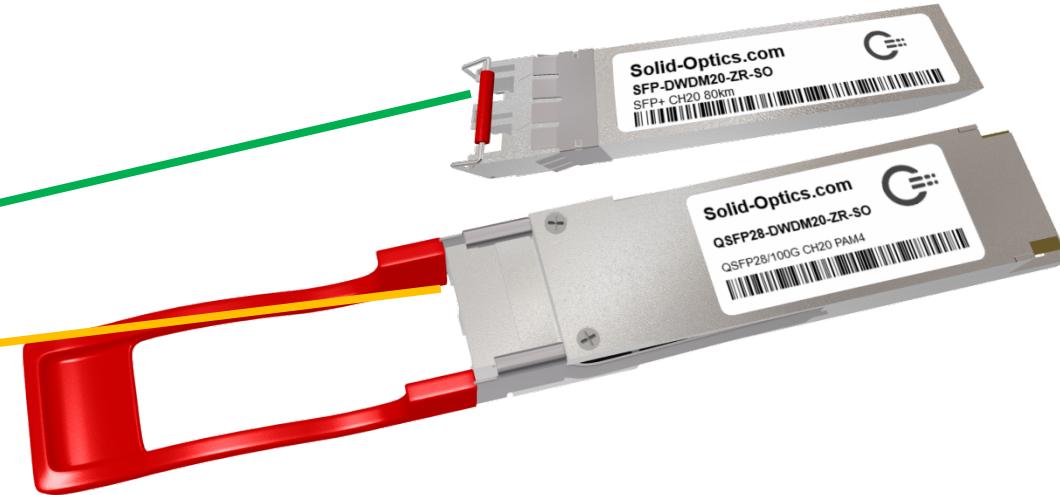

1) Dark Fiber

2) Multiplexers

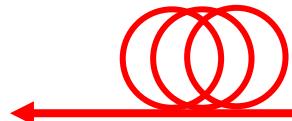

3) Light : Transceivers

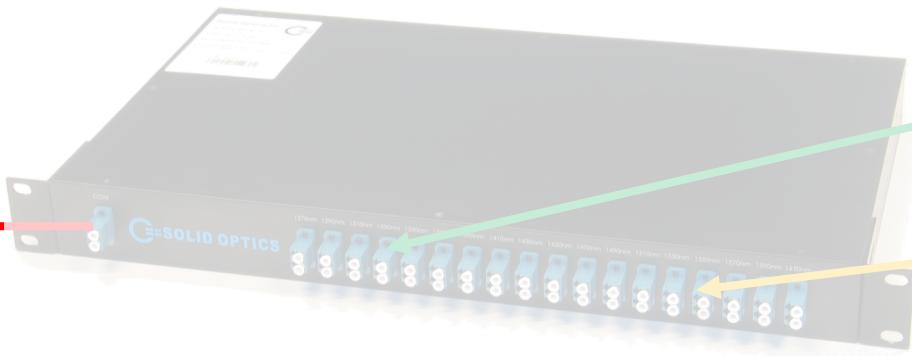

Ingredients for Multiplexing

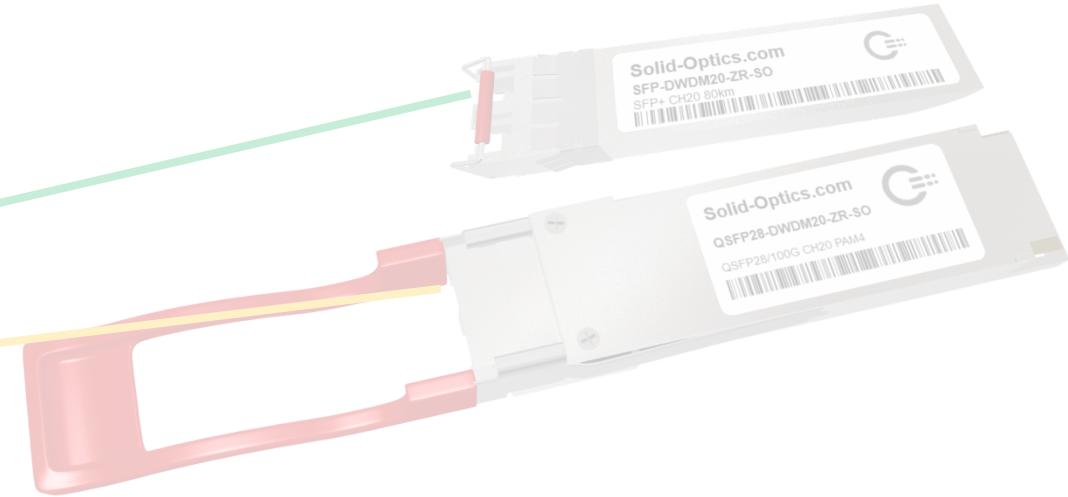

1) Dark Fiber

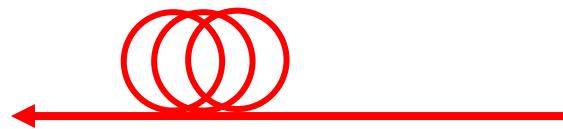

2 Multiplexer

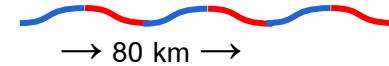

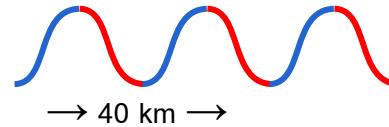

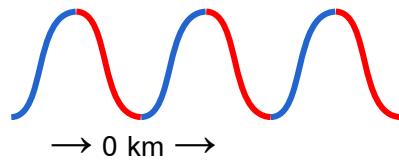

3 Light + Transceiver

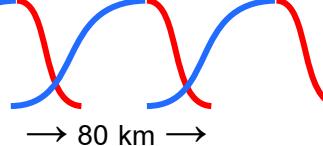

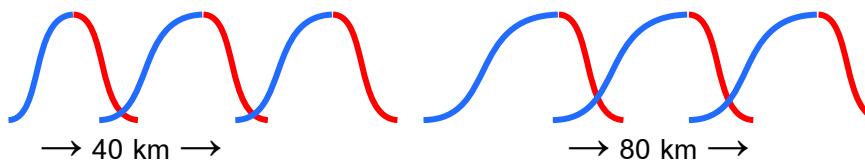

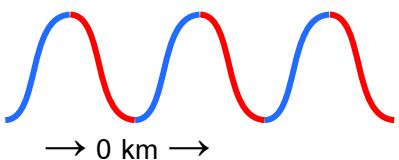

Dark Fiber

Attenuation

Dispersion

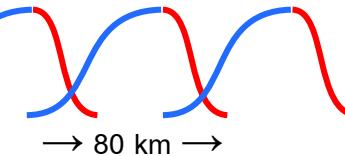

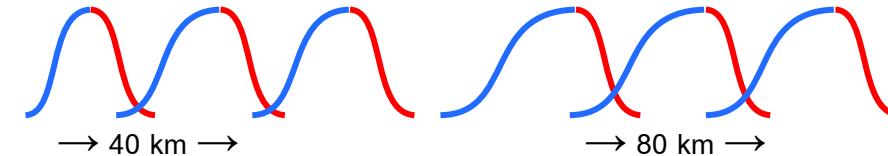

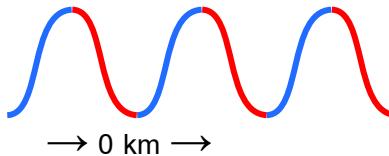

Dark Fiber

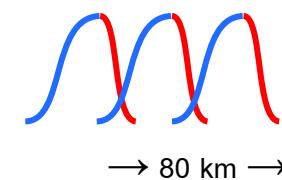

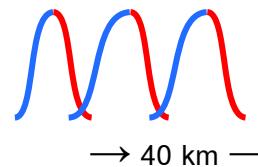

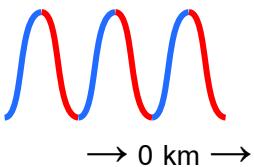

Dispersion

@1G

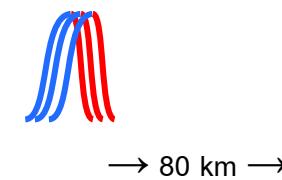

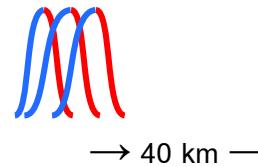

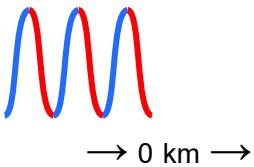

DWDM max 200km

@10G

DWDM max 80km

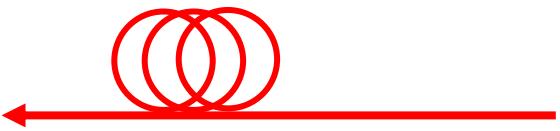

@25G

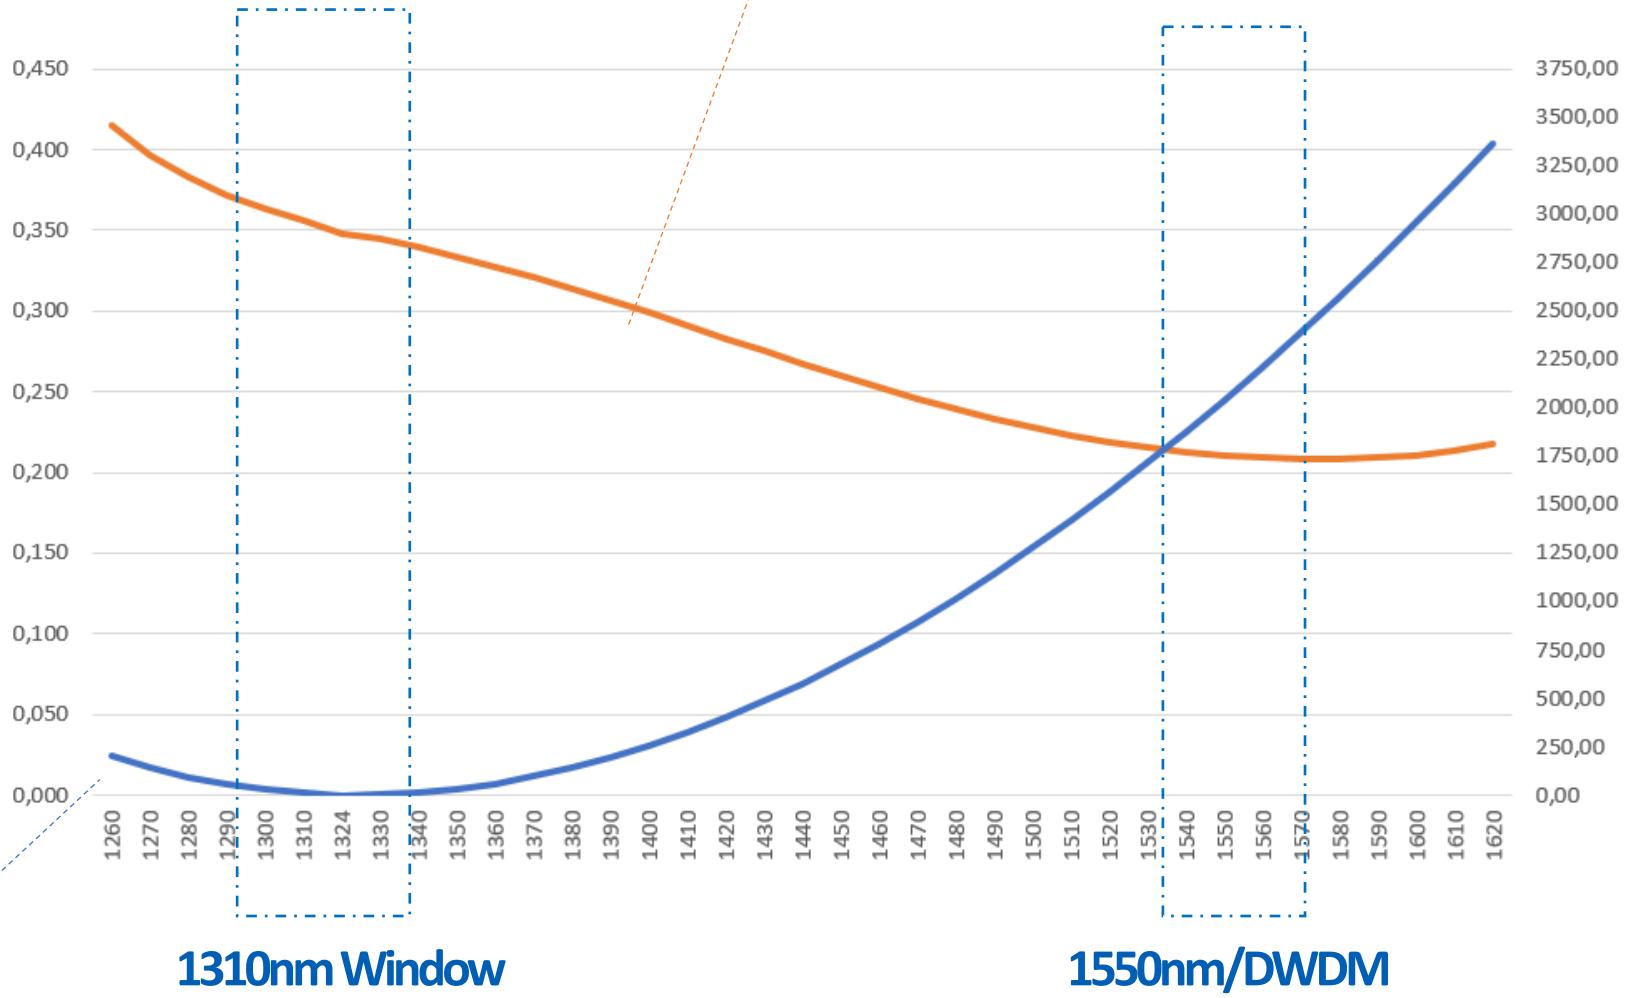

DWDM max 15km

Dark Fiber

Attenuation

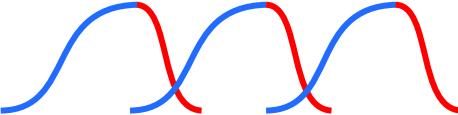

→ 80 km →

Dispersion

1550nm/DWDM

→ 80 km →

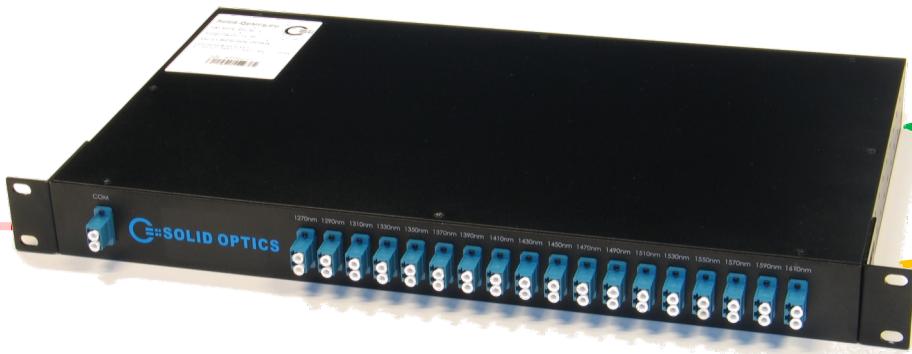

Ingredients for Multiplexing

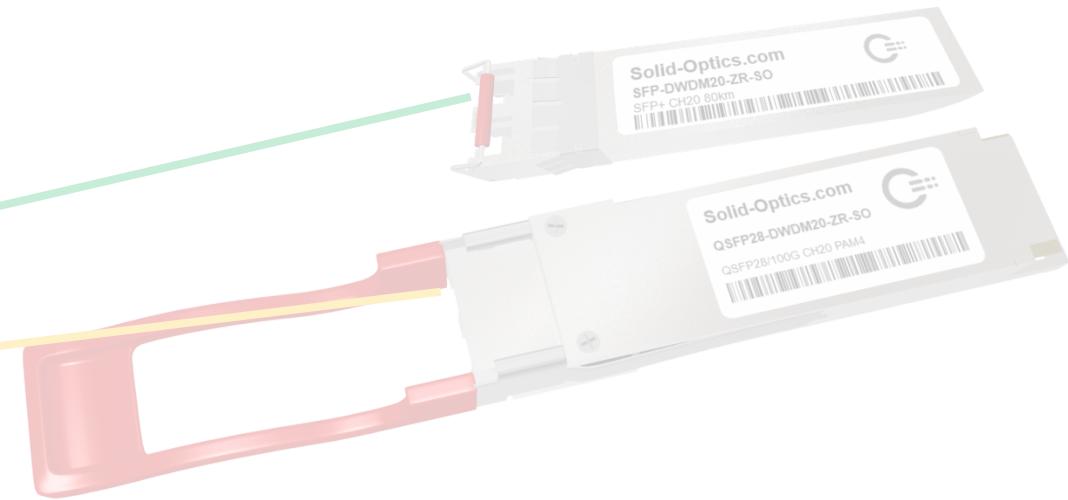

1 Dark Fiber

2) Multiplexers

3 Light + Transceiver

Passive Mux

Multiplexers

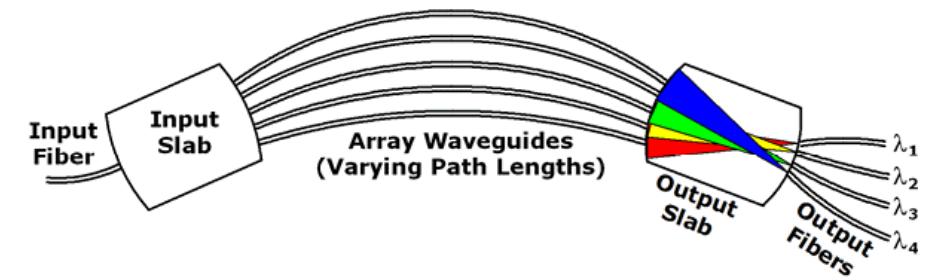

2 types

- Cascaded TFF

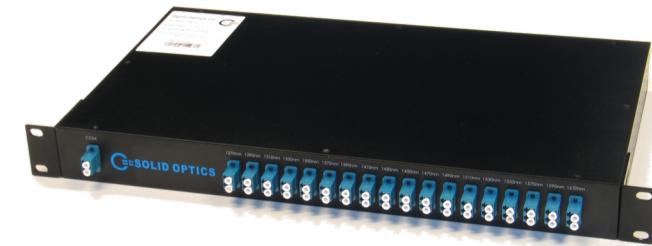

- AWG

95% of all Communication

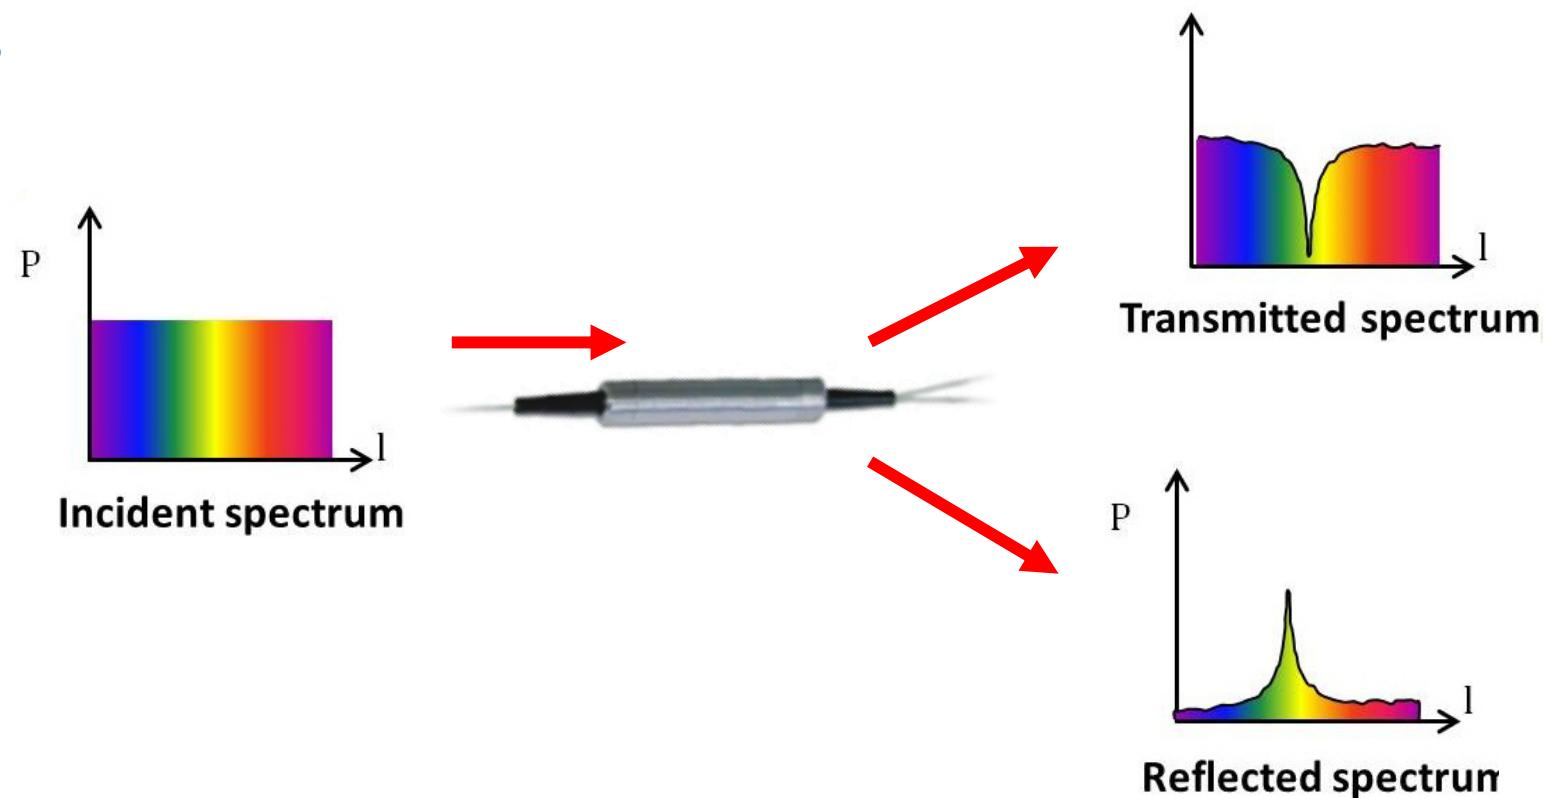

-Larger Multiplexers such as
40Ch/96Ch

Multiplexers

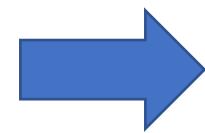

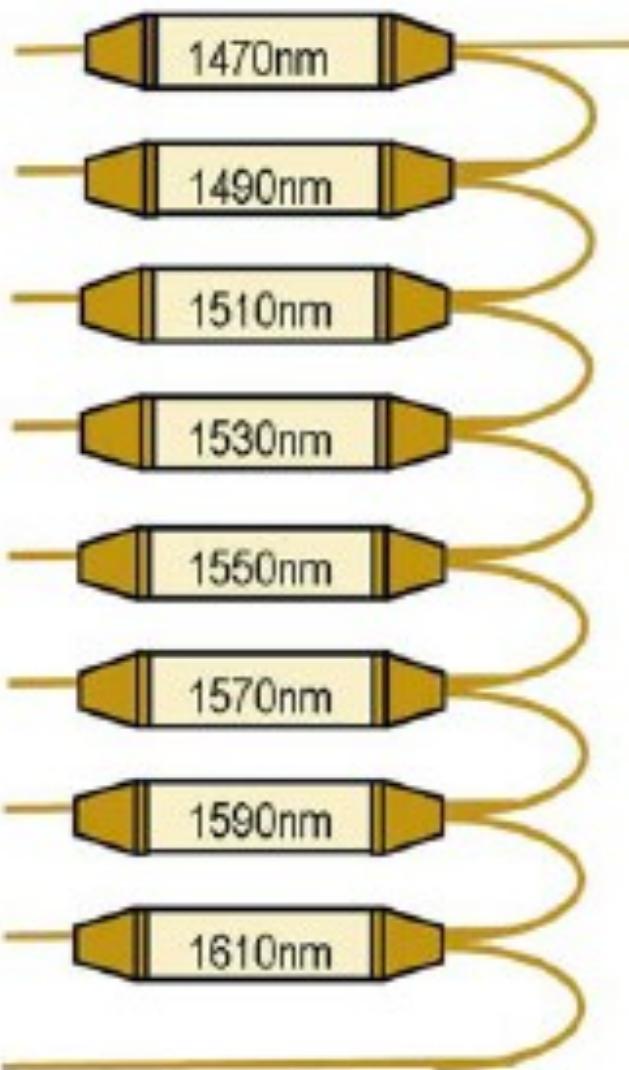

TFF: Thin film filter

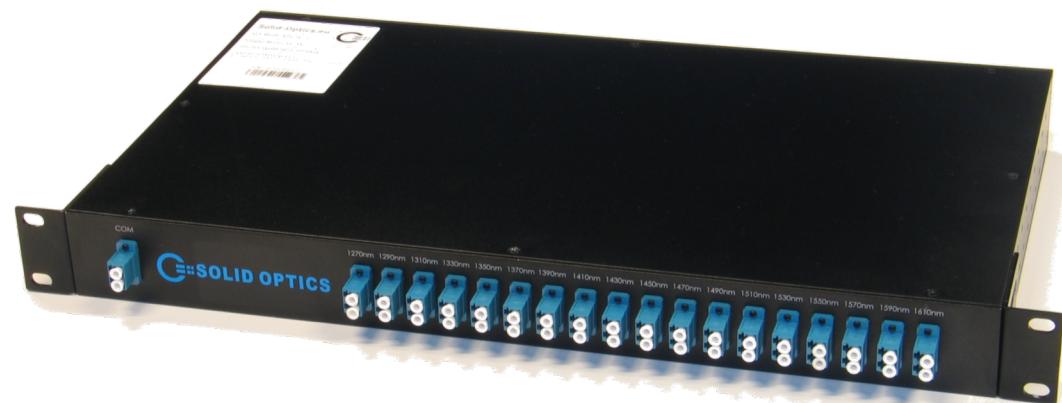

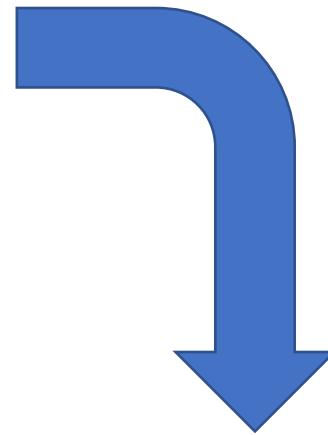

- Metal or glass tubes 2cm*4mm
- 3 fibers: com / color / reflect
- Each tube has 0.3dB loss
- 95% of Muxes & OADM

Multiplexers

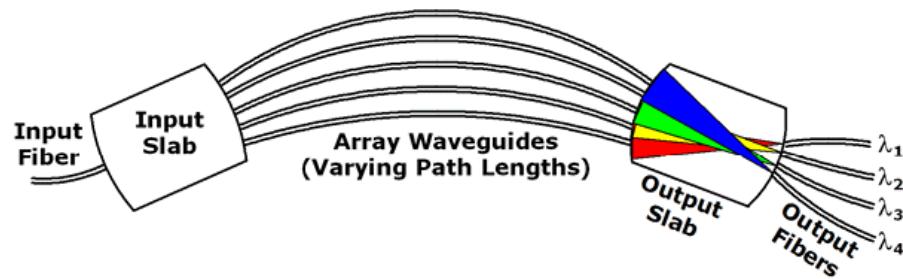

ABS casing

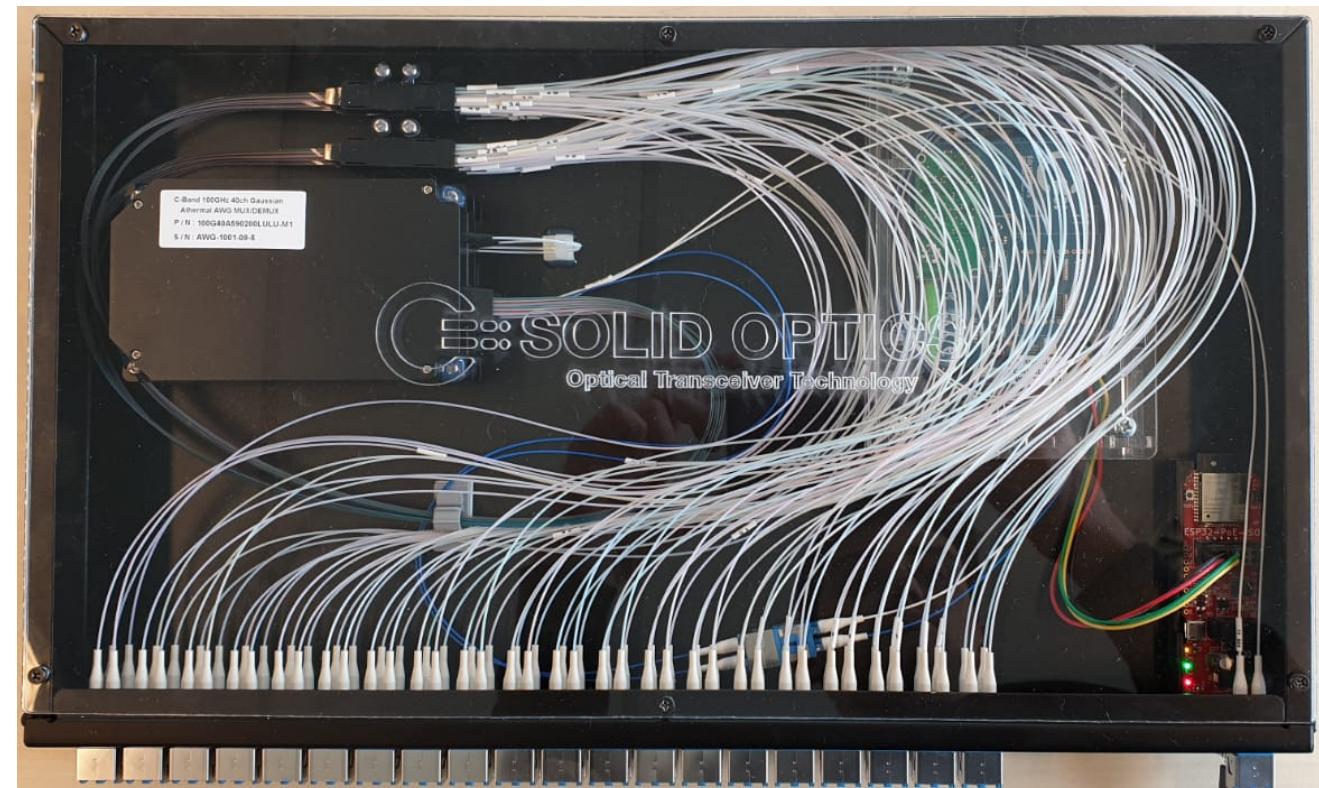

Multiplexers

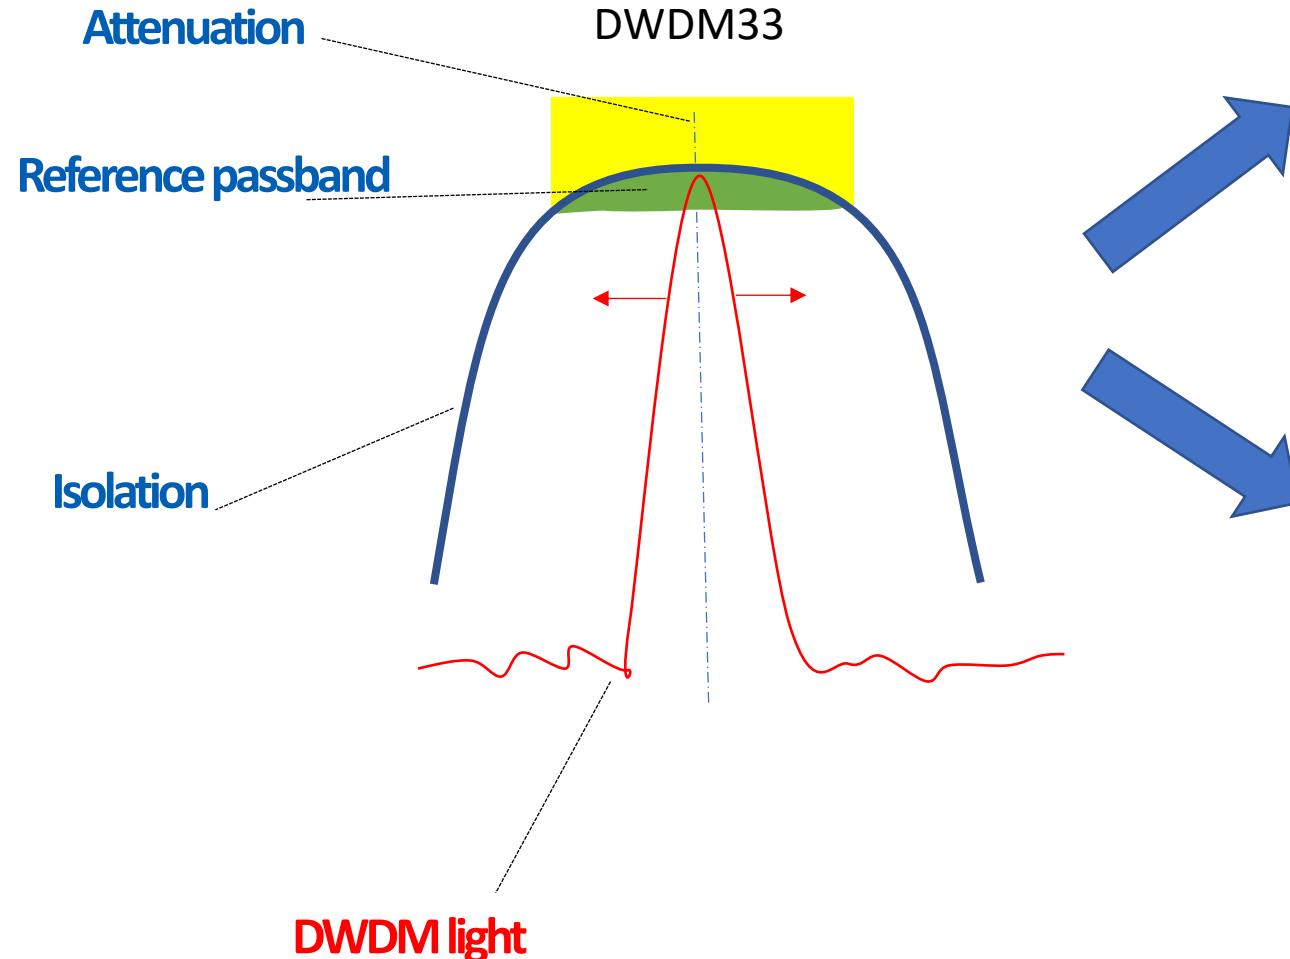

AWG: arrayed wave grading

- Larger muxes such as 40Ch/96Ch
- Lower loss
- Insertion loss 40ch = 3.0dB

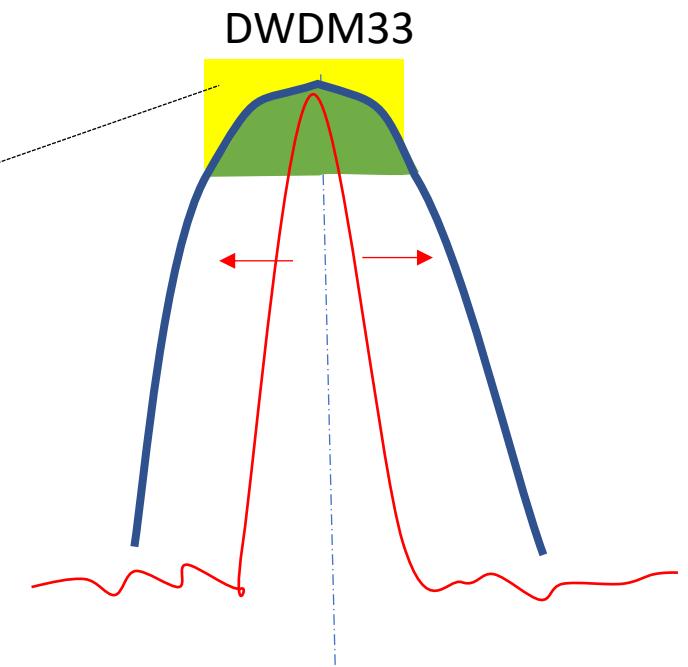

Transmission Window AWG

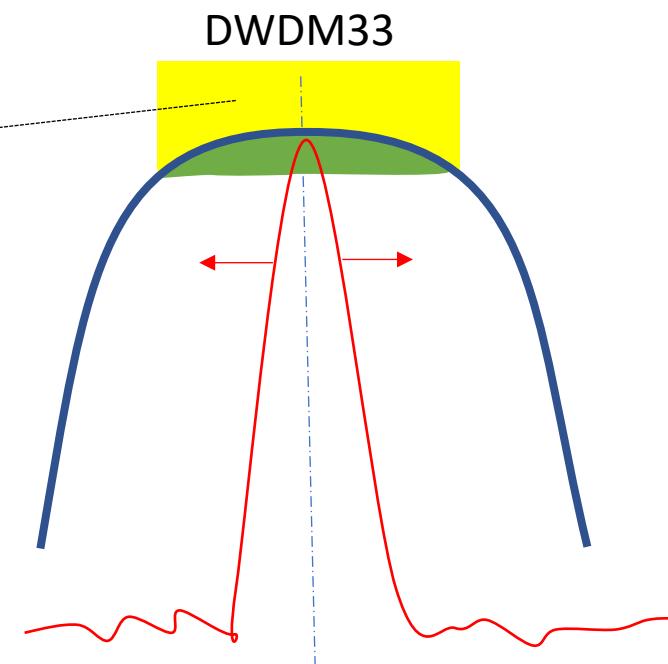

Gaussian Fit

Low attenuation
Small passband

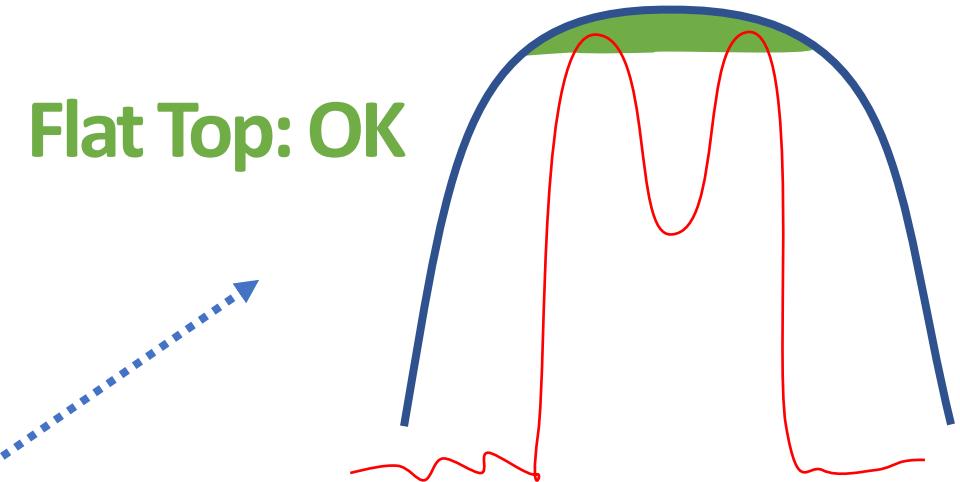

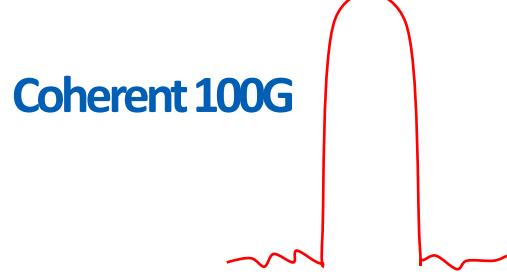

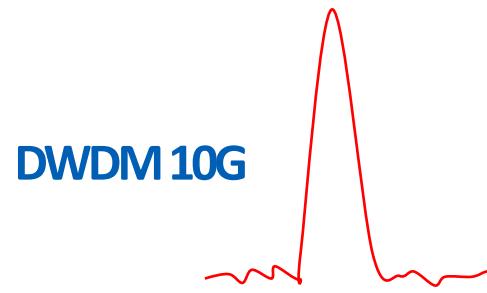

Flat Top

Higher attenuation
Wide passband

ALL TFF is Flat top

Transmission Wave Types

Gaussian Fit not OK

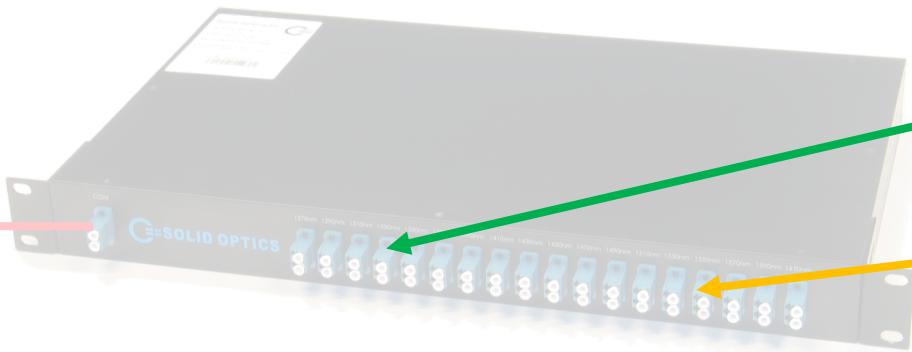

A red line plot showing two distinct peaks. A blue dotted arrow points from the text "Gaussian Fit not OK" to this plot. The plot includes a blue envelope curve and a green shaded area at the top of the peaks.

Ingredients for Multiplexing

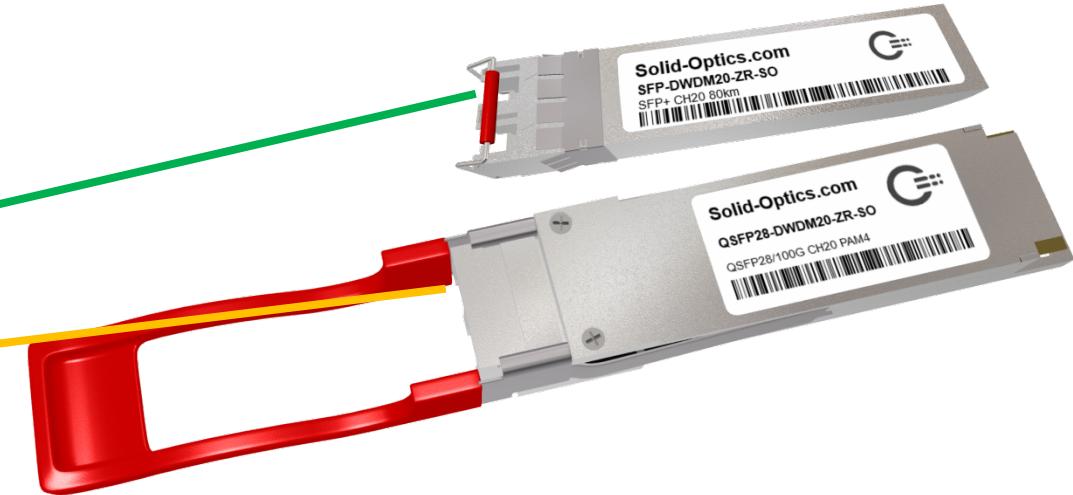

1 Dark Fiber

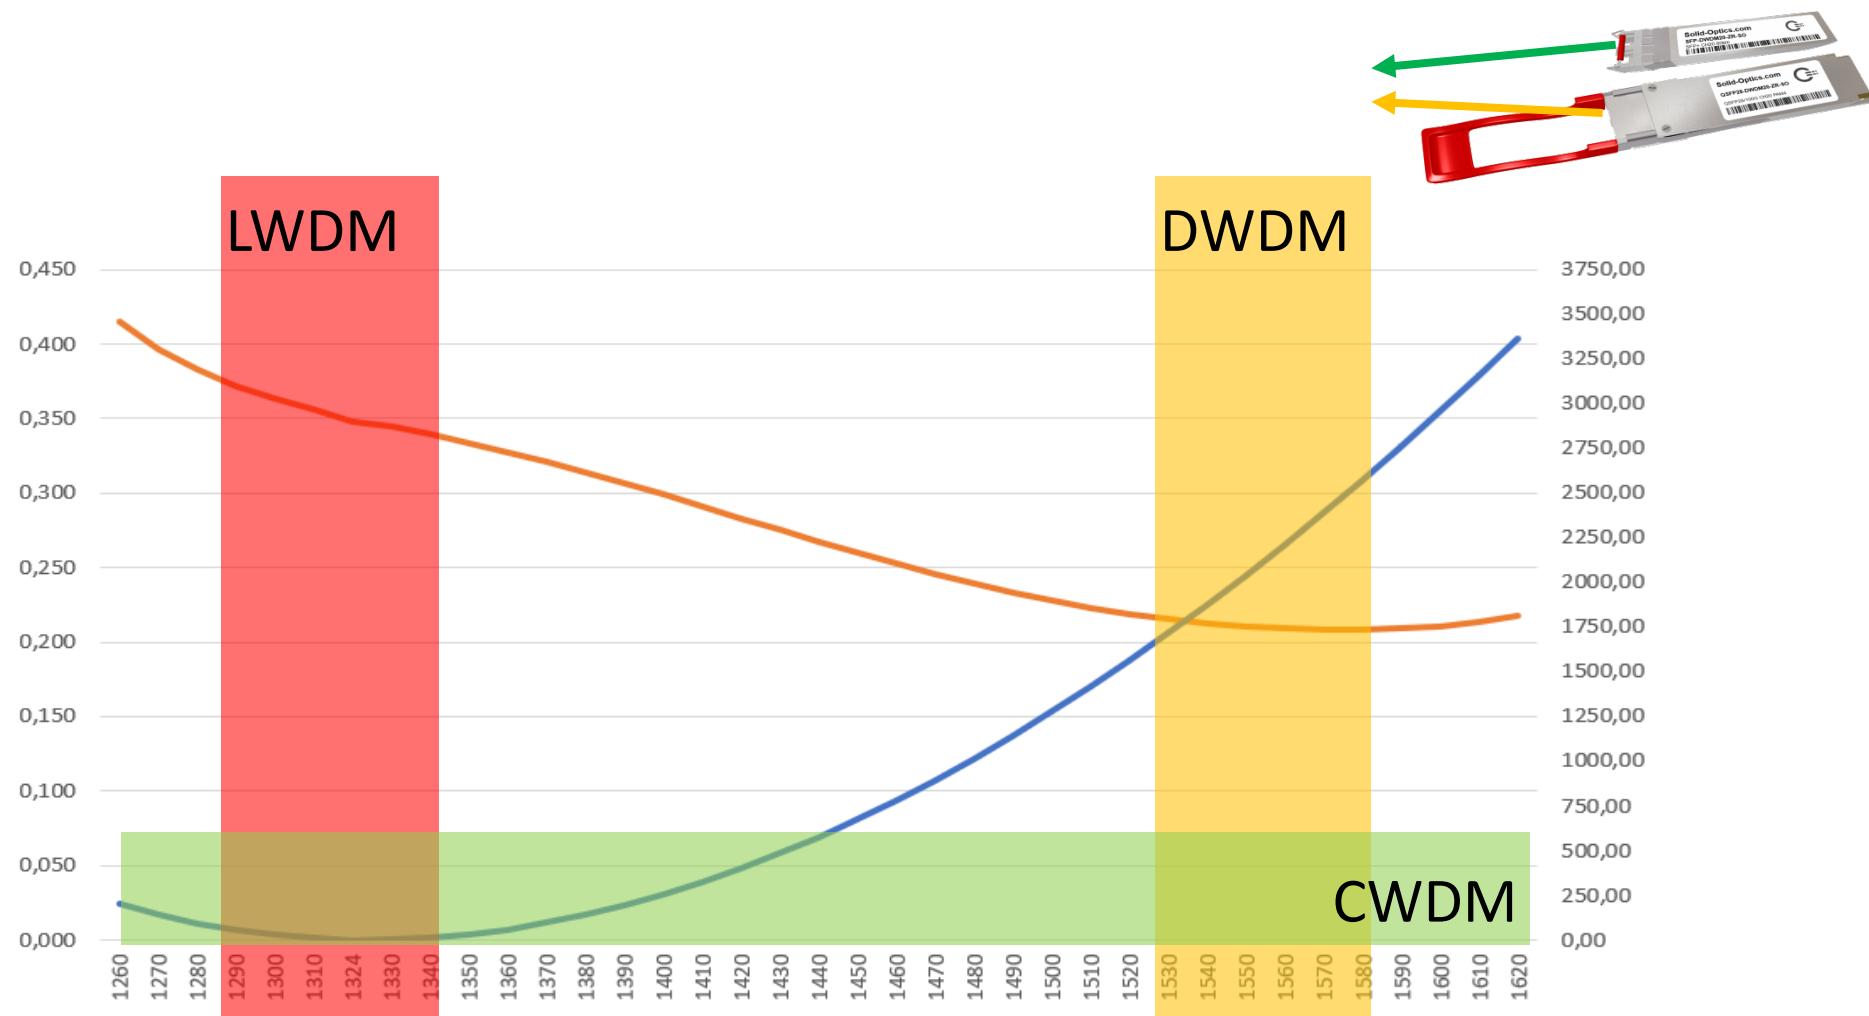

2 Multiplexer

3) Light: Transceivers

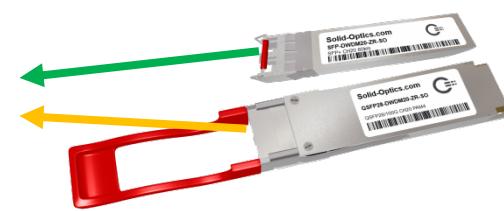

ITU Grids

	Attenuation	Dispersion	10G	25G/100G
DWDM	Low	High	80km	15km
LWDM	High	Low	40km	40km

LWDM Multiplexing

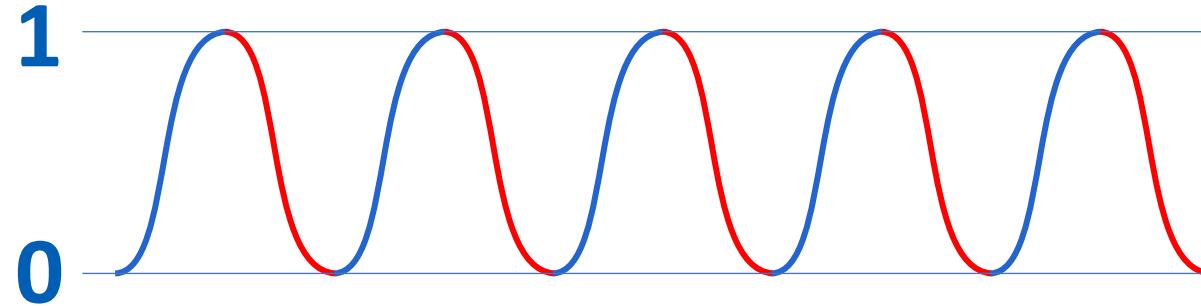

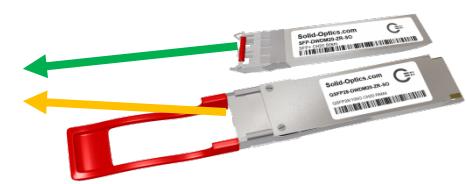

New ITU Band

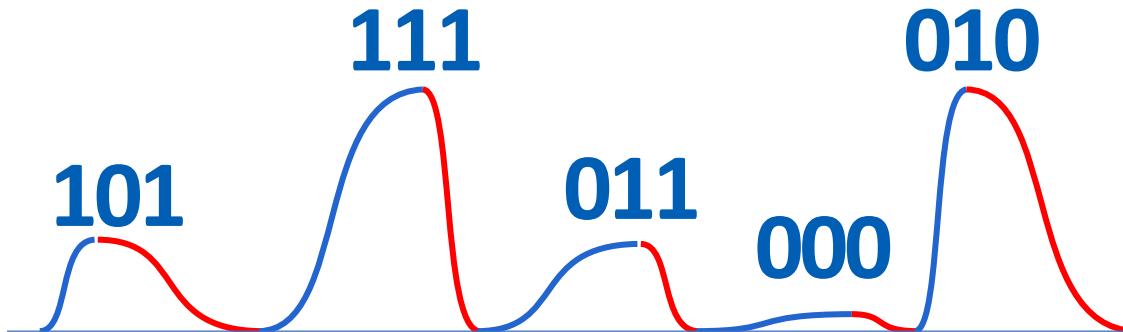

- 8 Channels in the 1310nm band
- 8 x 25G Multiplexing up to 40km
- Regular optics and regular passive muxes
- Possible 8x 100G up to 15km (future)
- Used in Korea a lot for 5G deployment

How to send more data with same signal

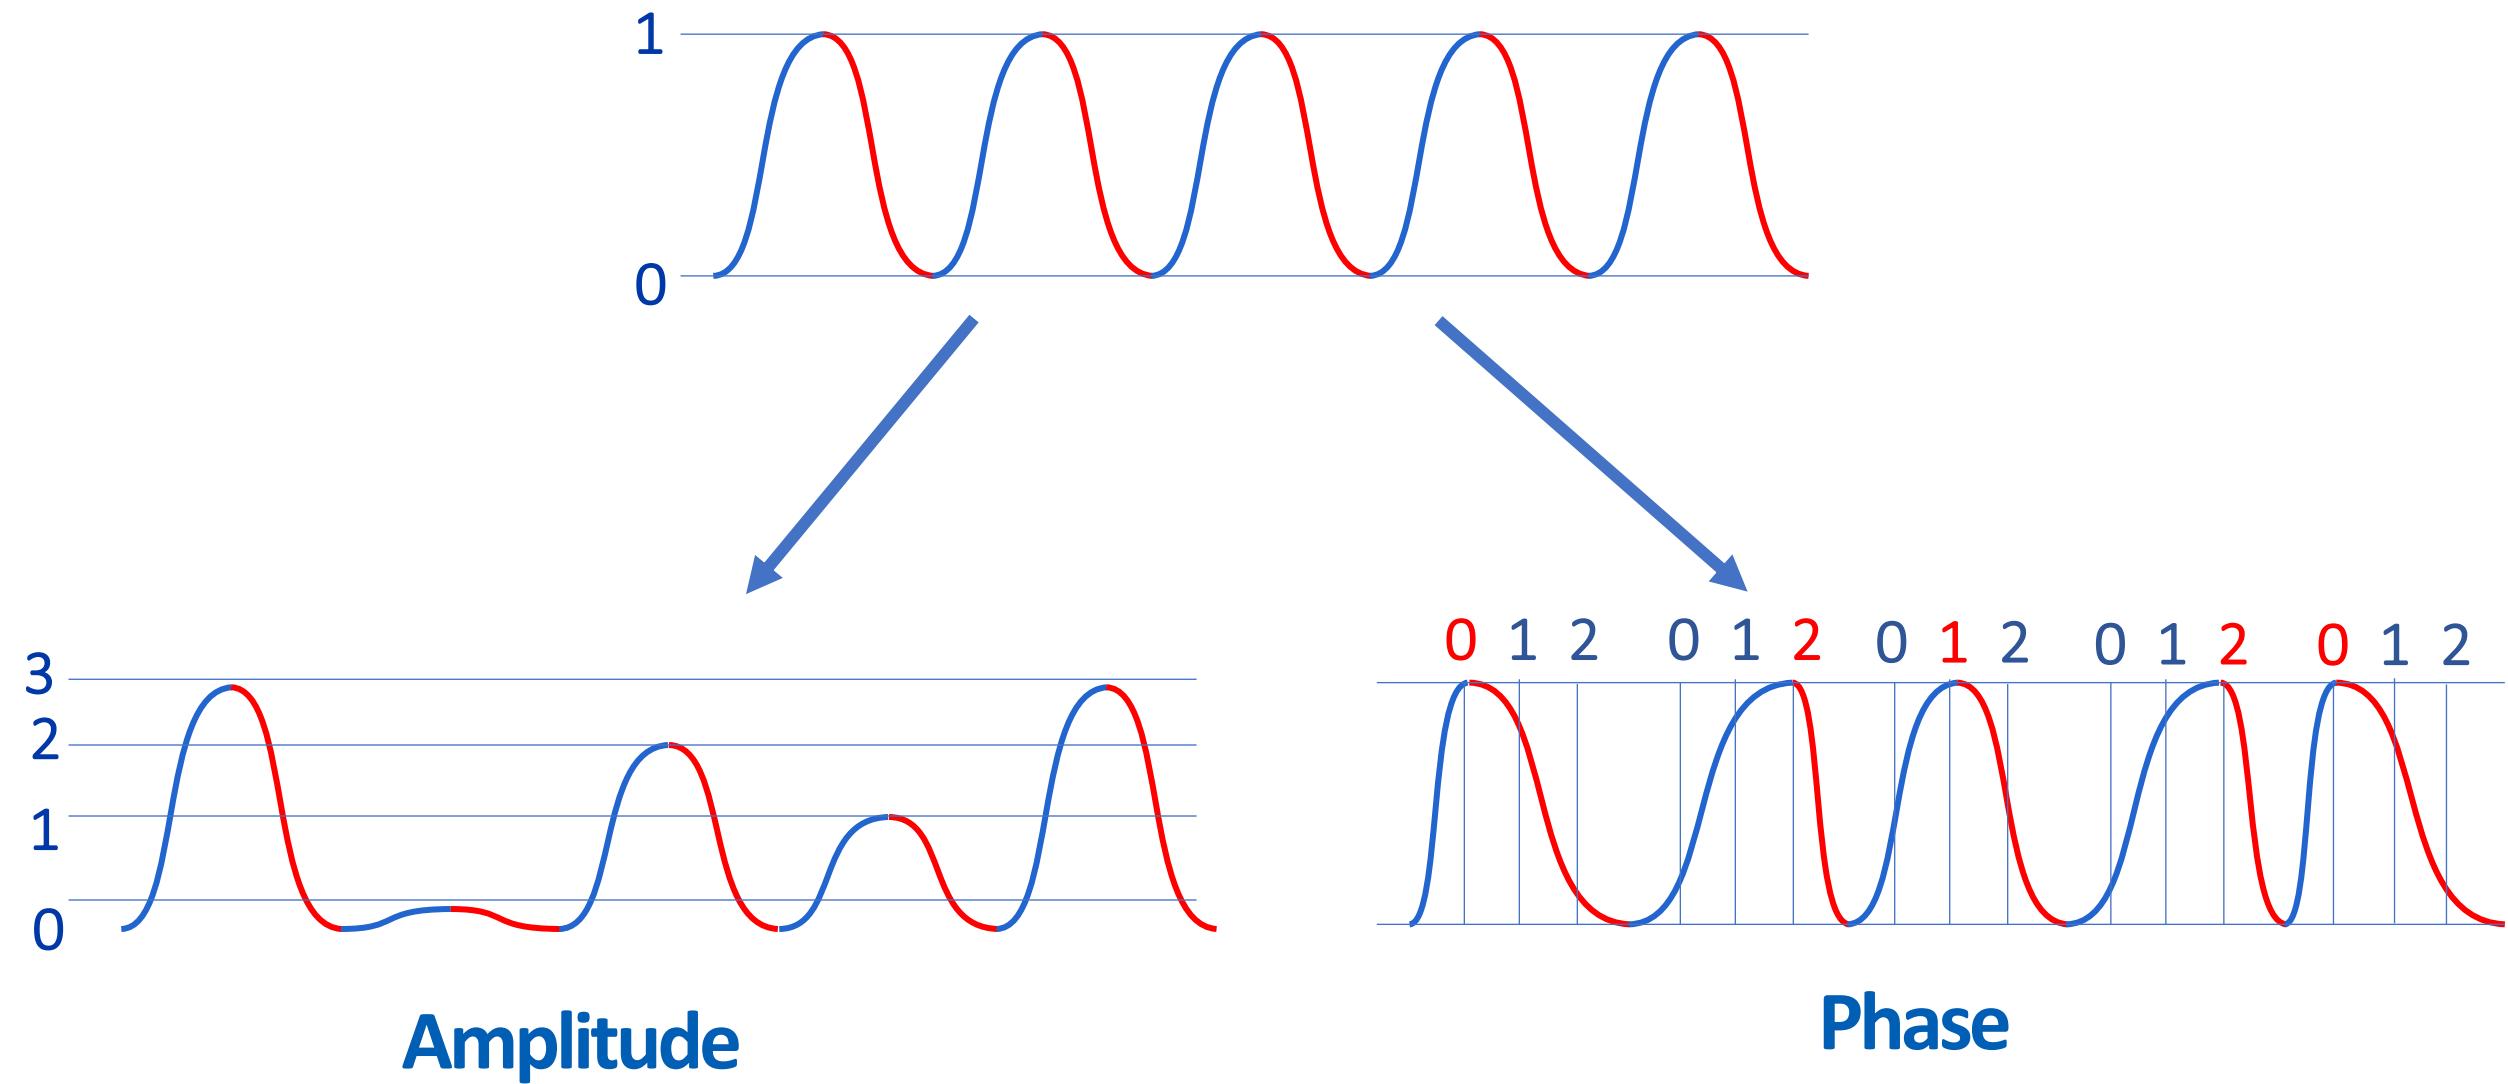

10G Signal speed with 10G data

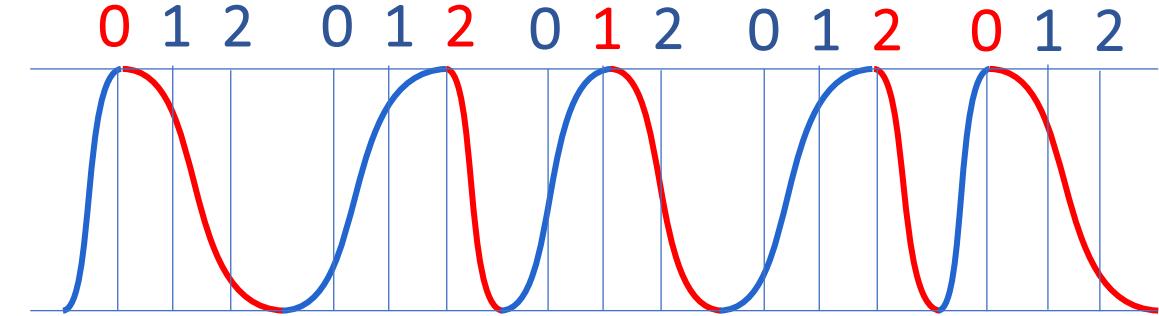

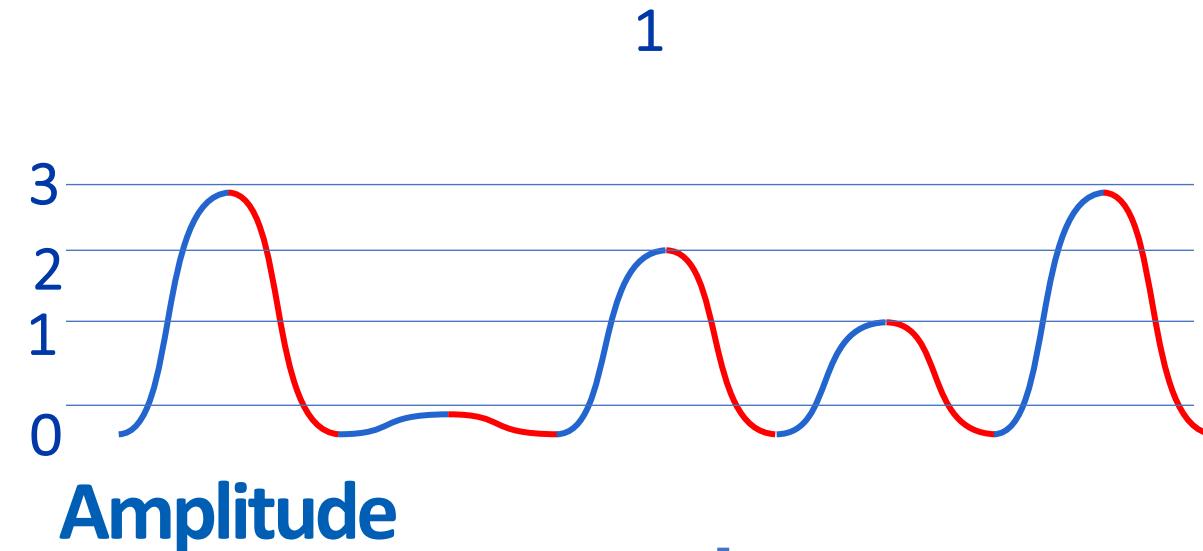

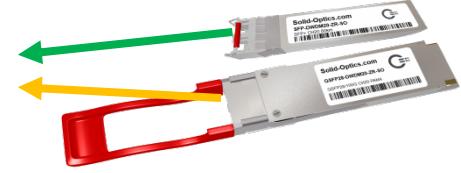

Modulation

10G Signal with 100G data

Modulation = More info per bit signal

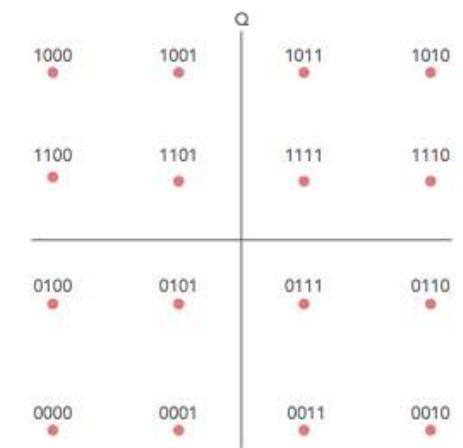

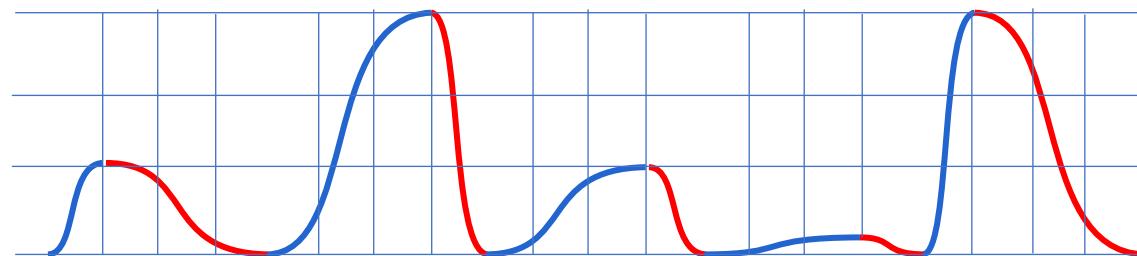

Modulation = more info per bit signal

Amplitude

Phase

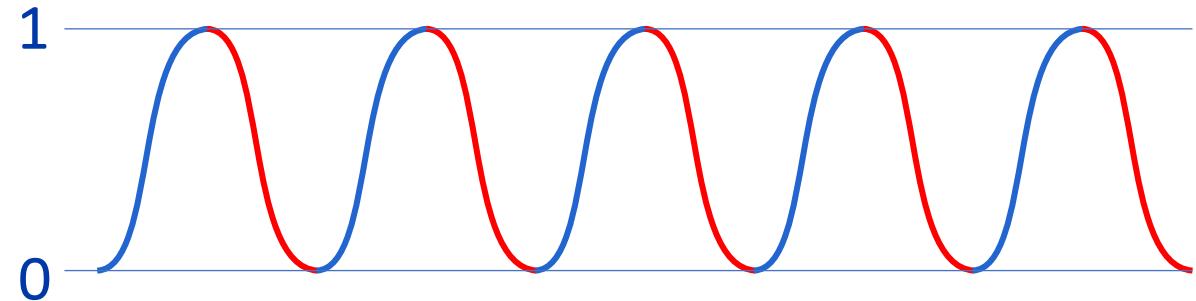

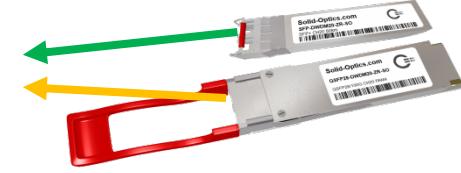

01 32 31 00 31

16QAM

32QAM

Modulation & Coherent 100G

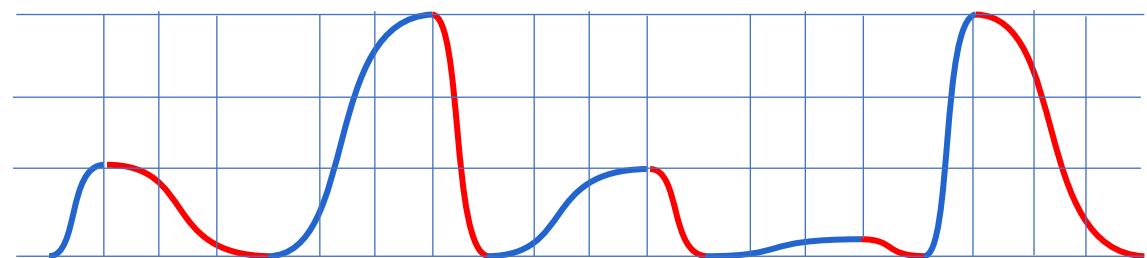

DSP chip

Needs a lot of processing power = Watts

Example CFP2-DCO = 20 Watts

QSFP28 is 4.5W so cannot work

Extra “active box” for the CFP2-DCO

16QAM = 100G

QSFP28 DWDM

100G DWDM in QSFP28

PAM4 modulation

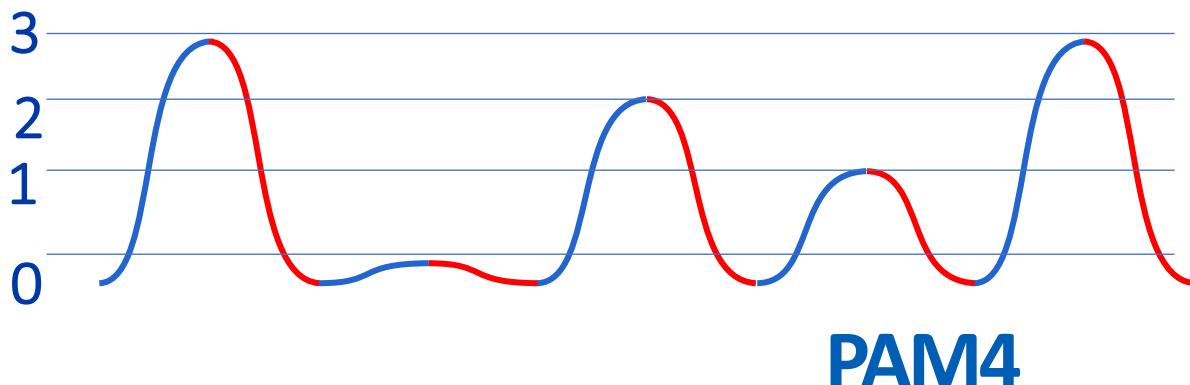

Due to modulation no optical power budget

Needs Amplification = EDFA to work

PAM4 needs Dispersion Compensation

Cheapest and easiest 100G Multiplexing method

Microsoft pushed this product

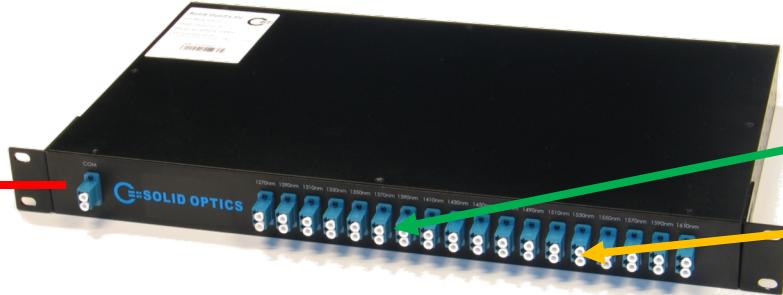

PAM4

Solid Optics offers an “All-in-one” box for 16 x 100G

Summary

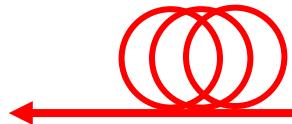

LWDM / 40km @ 8x 25G

LWDM

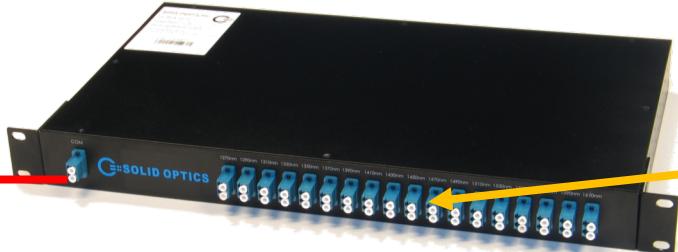

QSFP28 / 80km @ 100G

QSFP DWDM

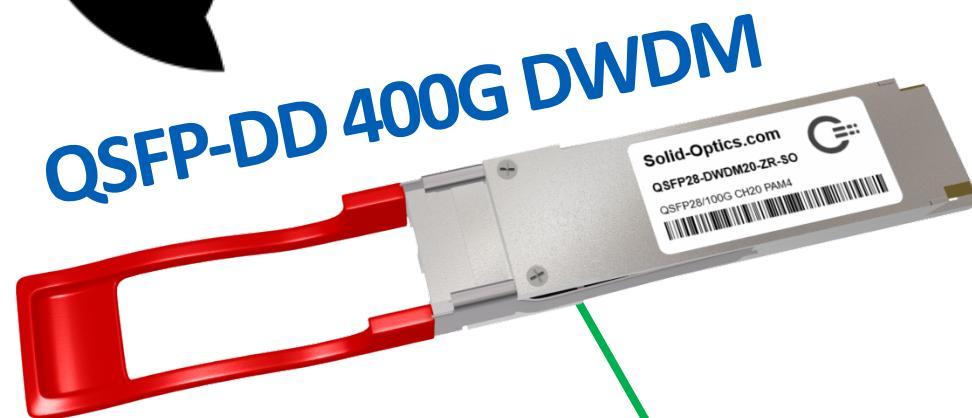

CFP2-DCO / 120km @100G

QSFP SR

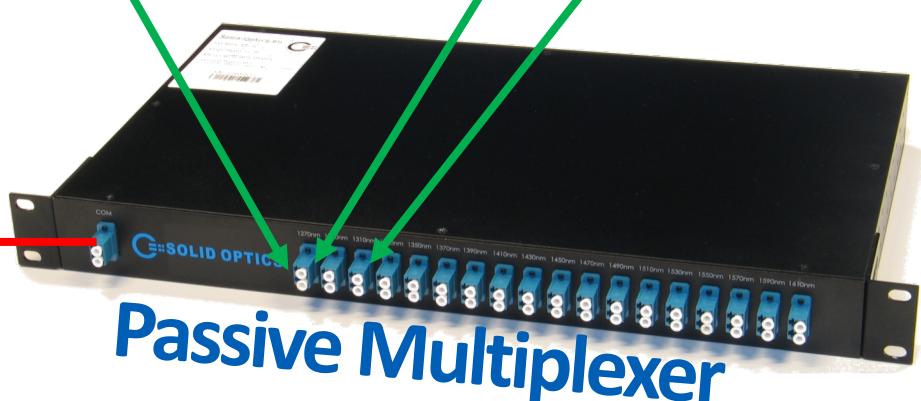

400G ZR is Coming !!

QSFP-DD 400G DWDM

Dark Fiber

Passive Multiplexer

1G DWDM ZR
↓
10G DWDM ZR

400G DWDM ZR
(EDFA Needed)

Additional Hints with 100G

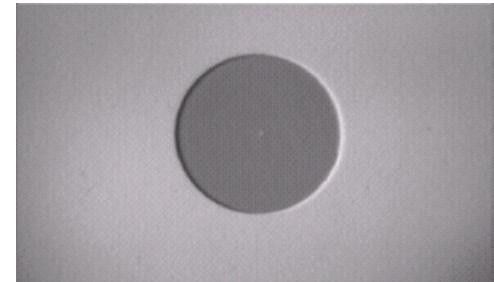

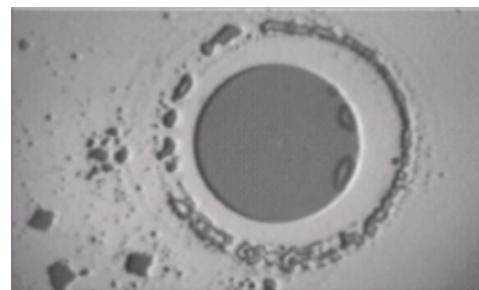

RS-FEC

Should match on both sides

Cisco

```
switch# configure terminal  
switch(config)# interface ethernet1/2,Ethernet 18/12  
switch(config-if-range)# fec cl91  
switch(config-if-range)# exit  
switch(config)# copy running-config startup-config  
switch(config)# exit
```

CLEAN
